Amendment Letter

Submitted Date: 10/13/2017

Comments:

These amendments to DCRB Filing No. 1701 reflect the agreement between the DCRB, the Ratepayer Advocate, and the Department of Insurance. The amendments include a cover letter, impacted exhibits, and revised filing forms. The overall impact is -5.73% for the collectible residual market rates and -3.00% for the collectible voluntary market loss costs. The corresponding manual residual market rate level change is -4.01%. The manual voluntary market loss cost change is -1.01%. These values are determined in Exhibit I of the Brown Book, which is identical to page 12.1 in Exhibit 12.

Do not hesitate to contact John Pedrick, 215-320-4429, jpedrick@dcrb.com, or Ken Creighton, 215-320-4924, kcreighton@dcrb.com, if you have any questions.

Comments:

The Delaware Department of Insurance is extending the review of the above referenced rate filing request as stated in Section 2506(c).

§ 2506. Effective date of filing.

- (a) The Commissioner shall review filings as soon as reasonably possible after they have been made in order to determine whether they meet the requirements of this chapter. The filings shall be deemed to meet the requirements of this chapter unless disapproved by the Commissioner.
- (b) Any special filing with respect to a surety or guaranty bond required by law or by court or executive order or by order, rule or regulation of a public body, not covered by a previous filing, shall become effective when filed and shall be deemed to meet the requirements of this chapter until such time as the Commissioner rejects the filing.
- (c) No filing shall be effective unless filed with the Commissioner not less than 30 days prior to the proposed effective date. Such filing shall be deemed to meet the statutory requirements unless disapproved by the Commissioner within 30 days of receipt of the filing. If the Commissioner shall determine that additional time is needed to review a rate filing, the Commissioner shall, within 25 days after receipt of the filing, notify the filer that the review of the filing shall be extended up to 90 days after the receipt of the filing, unless the insurer shall agree to a longer term of review.

Please do not implement this filing without a final disposition by the Department.

The Department will contact you directly if any additional information is needed.

If you have any questions regarding this procedure, please contact the Delaware Department of Insurance at (302) 674-7372.

VIA SERFF

The Honorable Trinidad Navarro Insurance Commissioner Insurance Department State of Delaware 841 Silver Lake Boulevard Dover, DE 19904-2465

Attention: Mitch Crane, Deputy Insurance Commissioner

RE: DCRB Filing No. 1701

Workers Compensation Residual Market Rate and Voluntary Market Loss Cost Filing Proposed Effective December 1, 2017 (Selected Portions Effective June 1, 2018)

Dear Commissioner Navarro:

On behalf of the members of the Delaware Compensation Rating Bureau, Inc. (DCRB), enclosed is a filing of proposed changes to Residual Market Rates and Voluntary Market Loss Costs in Delaware, along with changes to associated rating values and supplementary rate information.

| Indicated and Proposed Changes | | |
|----------------------------------|------------|--|
| Residual Market Voluntary Market | | |
| Rates | Loss Costs | |
| -4.91% | -2.15% | |

This filing is made in compliance with provisions of House Bill 241, workers compensation insurance legislation enacted in 1993. Most of these revisions are proposed to be effective on a new and renewal basis for workers compensation insurance policies with effective dates on or after 12:01 a.m., December 1, 2017. The portions of this filing updating the table of qualifying wages and credits for the Delaware Construction Classification Premium Adjustment Program are proposed to be effective on a new and renewal basis for workers compensation policies with effective dates on or after 12:01 a.m., June 1, 2018.

In preparing this filing, the DCRB has carefully considered current Delaware experience and has applied a variety of actuarial and economic analytical techniques that collectively support the proposal. A detailed discussion of the considerations, methods and exhibits can be found in the Actuarial Memorandum.

The Honorable Trinidad Navarro State of Delaware August 4, 2017 Page 2

The anticipated impact of House Bill 373 of 2014 is fully incorporated in the calculations underlying the proposed change.

Please direct any questions to me, John Pedrick, Vice President – Actuarial Services, or Kenneth Creighton, Chief Actuary. DCRB staff will be pleased to cooperate with and assist the Insurance Department in its prompt consideration of these proposals.

Sincerely,

William V. Taylor President

RE: DCRB Filing No. 1701

Workers Compensation Residual Market Rate and Voluntary Market Loss Cost Filing Proposed Effective December 1, 2017 (Selected Portions Effective June 1, 2018)

This actuarial memorandum provides a discussion of the analysis performed by the Delaware Compensation Rating Bureau, Inc. (DCRB) that results in proposed changes in Residual Market Rates, Voluntary Market Loss Costs, rating values and supplementary rate information for Workers Compensation insurance in Delaware.

SUMMARY OF THE PROPOSAL IN THIS FILING

This filing proposes an overall change in Residual Market Rates and Voluntary Market Loss Costs. The changes vary by class. Associated rating values will also be revised.

| Indicated and Proposed Changes | | |
|--------------------------------|------------------|--|
| Residual Market | Voluntary Market | |
| Rates | Loss Costs | |
| -4.91% | -2.15% | |

The actuarial methodology in the filing has not changed from the prior annual filing, No. 1603. However, adjustments for changes in law have been revised. In this filing, the underlying losses are adjusted to reflect Delaware law after House Bill 175 of 2013 (HB175) and prior to House Bill 373 of 2014 (HB373) (a "post-HB175" basis). As a result, an explicit factor is used to adjust the final calculations to a post HB373 law level that will be in effect for policies written from December 1, 2017 through November 30, 2018. These are discussed further in the Technical Discussion and Supporting Information section of this memorandum.

There is not yet sufficient data to accurately estimate the true impact of HB373. As a result, the full impact of HB373 contemplated in the law is reflected in this filing. When sufficient data becomes available, the DCRB will estimate its impact. The DCRB reserves the right to file any changes indicated by such an analysis. Without the assumption that the full savings contemplated in HB373 will be fully realized, the indicated changes would be higher, as shown below.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 2 of 20

| Indicated Changes Based on Portion of HB373 Savings That May Emerge | Residual Market Rates | Voluntary Market Loss Costs |
|---------------------------------------------------------------------|-----------------------------|-----------------------------------|
| HB373 Savings Fully Realized | -4.91% | -2.15% |
| 75% of HB373 Savings Realized | +1.62% | +4.57% |
| 50% of HB373 Savings Realized | +8.15% | +11.29% |

The DCRB supports and commends the Delaware Workers' Compensation Oversight Panel (WCOP) and its work to implement changes meant to achieve the savings contemplated in HB373, as well as its work to identify problems in the Delaware system and recommend solutions.

The supporting exhibits and other attachments accompanying this actuarial memorandum comprise the balance of the filing and provide pertinent information regarding the proposed residual market rates, voluntary market loss costs, rating values, supplementary rate information and supporting information for this filing. An index of exhibits appears at the end of this memorandum.

DISCUSSION OF THIS FILING'S METHODS, ANALYSIS AND FINDINGS

The proposed residual market rates, voluntary market loss costs and minimum premiums by classification submitted in this filing reflect DCRB's actuarial analysis of all available experience data, enacted legislation and other relevant factors to establish appropriate and lawful rating values for the policy period beginning December 1, 2017.

Delaware Workers Compensation Insurance Plan (Plan) - Residual Market Rates

Delaware law requires that a "residual market plan" be filed with the Insurance Commissioner by the advisory organization. Residual market coverage is provided under the auspices of the Delaware Workers Compensation Insurance Plan (Plan). Employers unable to obtain workers compensation insurance in the voluntary market may apply to the Plan. An insurance carrier is then assigned to administer coverage for that employer, either as a servicing carrier on behalf of the Plan or on a direct assignment basis.

Historically, rates for the Plan have been promulgated based on statewide experience. The loss ratio (the ratio of losses to premium) for the Plan has historically been significantly higher than the loss ratio for the voluntary market. As shown in Exhibit 19, the loss ratio for the Plan, based on five years of experience, is 88% higher than the loss ratio for the voluntary market. As a result of this historical imbalance, employers insured in the Plan are subject to a surcharge. Since August 1, 1997, those employers insured in the Plan, which are eligible for experience rating and produce an experience modification greater than 1.000 in accordance with the approved Experience Rating Plan, have been subject to a surcharge program. This surcharge program is intended to provide incentives for employers to improve their workers compensation loss experience and/or to secure workers compensation coverage from the voluntary market. In this filing, as in filings since the inception of the surcharge program, the expected amounts of the Plan surcharges are accounted for in the form of offsets to voluntary market loss costs. The average change in collectible rate level for the residual market prior to the effect of Plan surcharges proposed in this filing is a decrease of 4.91%.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 3 of 20

The components of the proposed overall change in residual market rates are shown below in descending order of their impact on the filing indication.

| | Components of Indicated Change in Residual Market Rates | | | |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--|--|
| | Component | Impact on Indication | | |
| 1 | House Bill 373 | -21.54% | | |
| 2 | Expenses other than LAE and Loss-Based Assessments | -4.50% | | |
| 3 | Limited Indemnity Trend | -2.26% | | |
| 4 | July 1, 2018 Benefit Change | -0.52% | | |
| 5 | Limited Indemnity Loss | -0.35% | | |
| 6 | Indemnity Excess Loss | +0.70% | | |
| 7 | Loss-Based Assessments | +0.75% | | |
| 8 | Limited Medical Trend | +1.07% | | |
| 9 | Loss Adjustment Expense | +4.20% | | |
| 10 | Medical Excess Loss | +6.25% | | |
| 11 | Limited Medical Loss | +15.39% | | |
| | Overall Indicated Change | -4.91% | | |
| | Note that the total results from converting the percentages to factors (e.g., -21.54% is 0.7846 in factor form) and calculating the product of all 11 factors. | | | |

These components can be summarized into broader categories:

| Category | Impact on Indication |
|-------------------------------------------------|----------------------|
| Legislation (1) | -21.54% |
| Other Expense and Loss-Based Assessments (2, 7) | -3.78% |
| Indemnity Loss (3, 5, 6) | -1.92% |
| July 1, 2018 Benefit Change (4) | -0.52% |
| Loss Adjustment Expense (9) | +4.20% |
| Medical Loss (8, 10, 11) | +23.90% |
| Overall Indicated Change | -4.91% |

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 4 of 20

Voluntary Market Loss Costs

Since the enactment of House Bill 241 in 1993, Delaware law has applied a "loss cost" approach to pricing of workers compensation insurance written in the voluntary market. Under this system, the advisory organization (i.e., the DCRB) filings are limited to prospective loss costs, which reflect loss and loss adjustment expense, as well as policy forms, uniform classification and experience rating plans and rules, and supporting information. Advisory organization filings specifically exclude provisions for profit and expenses, other than loss adjustment expenses and loss-based assessments. Provisions for profit and expenses, other than loss adjustment expenses and loss-based assessments, are incorporated into voluntary market workers compensation rates by virtue of competitive filings made by each insurer. Insurer expense filings may adopt loss costs filed by the advisory organization or the rates and supplementary information filed by another insurer, by reference, with or without deviation.

Consistent with past practice, in this filing the DCRB has derived indicated changes in voluntary market loss costs directly from the proposed residual market rate change discussed above. This derivation is accomplished by removing from those rate proposals the combined effects of all provisions for profit and expenses, other than loss adjustment expenses and loss-based assessments. As a result, like the proposed changes in Plan rates, these proposed revisions in overall voluntary market loss costs are based on statewide experience.

The relationship between collectible residual market rates and voluntary market loss costs is based on a loss cost multiplier (LCM) derived from industry underwriting expenses (Exhibit 11), including the profit provision from the internal rate of return analysis (Exhibit 9). Under Delaware law, loss adjustment expenses and loss-based assessments are included in the loss costs filed by the DCRB. The LCM is the reciprocal of the ratio of loss, loss adjustment expense and loss-based assessments to premium. In last year's filing, No. 1603, the proposed LCM was $1.4288 \ (= 1 \div 0.6999)$. The proposed changes of +3.18% for residual market rates and +1.68% for voluntary market loss costs in Filing No. 1603 differed due to revisions in industry underwriting expenses and profit. However, due to the compromise with the Department of Insurance in which both markets received a 0.0% overall change, no change in the underlying LCM was reflected. The compromise kept the LCM at the previous year's level, $1.4081 \ (= 1 \div 0.7102)$.

The loss cost multiplier in this filing, No. 1701, is 1.3684 (= $1 \div 0.7308$). Exhibit 12, page 12.1, line (10), reflects this modification to the DCRB's standard calculations. The table below provides the details.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 5 of 20

| ent Provision As a recent of Premium 56.50 11.59 5.56 2.56 3.63 8.62 2.00 0.32 | Proposed Provision As a Percent of Premium 58.38 12.18 5.38 2.39 3.26 8.38 2.00 |

| | |
| 0.32 | |
| 0.02 | 0.33 |
| 1.32 | 1.10 |
| 1.90 | 2.52 |
| 2.00 | 3.00 |
| 4.00 | 1.08 |
| 1.03 | n/a |
| 71.02 | 73.08 |
| | 1.03 |

Using the proposed provision for loss, loss adjustment expense and loss-based assessments (the provision for loss costs), the indicated change in voluntary market loss costs is -2.15%, which is computed as follows:

$$0.9509 \times 0.7308 / 0.7102 = 0.9785$$

The proposed decrease in voluntary market loss costs is attributable to the same factors as those that impact residual market rates, except that the effects of expense provisions, other than loss adjustment expense and loss-based assessments, do not apply to loss costs.

It is important to note that the net effect of the proposed loss costs on ultimate prices for employers that will be insured in the voluntary market (the majority of all insured risks) may differ significantly from employer to employer and from insurer to insurer. Workers compensation insurance prices for these employers will be a function of individual carrier decisions. Each carrier may elect to use the DCRB's loss costs by reference, to deviate from those loss costs, to file independent loss costs, or to use loss costs filed by another insurer by reference. In addition, employers may obtain their future workers compensation insurance from a different insurance carrier than the carrier providing their current policy, further expanding the range of possible price changes that individual risks may experience. These variables in the determination of the ultimate price impact of the DCRB's filing are natural consequences of the competitive pricing system implemented in Delaware.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 6 of 20

Residual Market Surcharge, Exhibit 19

Experience of employers insured under the Plan in Delaware has historically presented an aggregate loss ratio higher than that of employers insured in the voluntary market. As mentioned earlier, the loss ratio of Plan accounts was higher than that of voluntary business by more than 88% in the period 2010–2014.

During the late 1980s and early 1990s, Delaware had seen persistent increases in the portion of the market insured in the Plan. In previous response to these concerns the DCRB filed, and the Insurance Commissioner approved, a Plan surcharge program in 1997 that incorporated the following features:

- Surcharges are limited to risks eligible for experience rating and only apply to risks with debit experience modifications (i.e., those employers with demonstrably higher than average experience).
- To avoid redundant or inequitable penalties, surcharges are applied only to the extent that
 each employer is not fully credible in the Experience Rating Plan. This procedure assesses
 larger proportional surcharges to small employers, who are largely protected from the effects
 of their own experience in the Experience Rating Plan, but reduces surcharges applicable to
 larger employers whose premiums significantly respond to their own loss records.
- Surcharges are limited to the debit portion of each risk's experience modification. This
 limitation provides a smooth transition from non-rated to experience-rated risks and/or from
 small experience rating credits to small experience rating debits.

The surcharge expressed as a factor to be applied to standard premium is computed using the following formula:

0.50 x (1.000 - risk credibility in the Experience Rating Plan)

As noted above, Plan loss ratios continue to be higher than those of the voluntary market. Since 2005, the portion of the Delaware workers compensation market insured under the Plan declined from a high of approximately 20% to a low of about 5% in 2010. For this filing, the Plan market share is estimated at 7.38%. This estimate is based on the most recent available policy year, 2016.

This filing retains the Plan surcharge program as a disincentive for employers to have their Delaware workers compensation insurance coverage placed in the Plan.

The DCRB estimates that the surcharge program will produce an average surcharge for subject risks of approximately 21.7% of premium. Recognizing that some employers insured in the Plan do not qualify for experience rating and that other employers insured in the Plan qualify for experience rating but produce credit modifications, the surcharges produced by the proposed procedure would represent approximately 9.2% of total Plan premium.

The full amount of this surcharge premium is recognized in the calculation of proposed voluntary market loss costs for this filing. This approach allows a reduction of manual loss costs by approximately 1% and essentially produces three different benchmark loss cost levels underlying workers compensation insurance rates in Delaware. These different underlying loss cost levels are as defined below:

1. Plan risks subject to surcharges (highest level depending on individual risk experience)

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 7 of 20

- 2. Plan risks not subject to surcharges (based on statewide average experience)
- 3. Voluntary market risks (based on statewide average experience reduced by offset for surcharges applied to first group above)

The DCRB believes that while the Plan surcharge approach does not fully address the loss ratio difference between the residual and voluntary markets, it is practical and represents a reasonable step toward reducing Plan subsidies and providing meaningful disincentives for placement of employers in the Plan.

<u>Delaware Construction Classification Premium Adjustment Program (DCCPAP), Exhibit 14</u>

This filing proposes to update the reference to calendar quarter(s) used as the basis for determining qualifying wages for the DCCPAP and update the table of qualifying wages underpinning that program consistent with recent changes in the Statewide Average Weekly wage in Delaware.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 8 of 20

Other Filing Provisions

In addition to proposed residual market rates, voluntary market loss costs and residual market surcharges, this filing addresses a number of rating values, programs, rules and procedures which are integral parts of the Delaware workers compensation insurance system. In general, the filing's proposals simply reflect parametric changes in various rating values consistent with the most recent available Delaware experience. Detailed information supporting each of these proposals is provided elsewhere in this filing. Here is a brief synopsis of these other changes:

| Item | Filing Exhibit(s) | Proposed Change | Purpose | |
|--------------------------------------------|----------------------|---------------------------------------------------------------------|----------------------------------------------------------------|--|
| DCCPAP Program – Effective June 1, 2018 | 14 | Revise manual rating value offsets & wage table | Maintain revenue balance of the program | |
| Minimum Premium (residual market) | 11, 27 | Update parameters | Update for wage inflation | |
| Excess Loss Factors | 17b, 17c | Update ELFs | Maintain accuracy of rating values based on current data | |
| Excess Loss Premium Factors | 17d, 17e | Update ELPFs | Maintain accuracy of rating values based on current data | |
| State and Hazard Group Relativities | 18 | Update Rating Values | Maintain accuracy of rating values based on current data | |
| Experience Rating Plan | 13, 20, 21, 27 | Update Rating Values | Maintain accuracy of rating values based on current data | |
| Small Deductible Program | 16 | Revise existing premium credit and loss elimination ratio schedules | Maintain accuracy of rating values based on current data | |
| Workplace Safety Program | 29 | Revise manual rating value offsets | Maintain revenue balance in the program | |
| Merit Rating Plan | 29 | Revise manual rating value offsets | Maintain revenue balance in the program | |
| Retrospective Rating Plan | 24, 25 | Revise optional development factors and tax multiplier | Maintain accuracy of rating values based on current data | |

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 9 of 20

TECHNICAL DISCUSSION AND SUPPORTING INFORMATION

Attached to this filing are exhibits and materials that provide technical support for each of the proposals. In addition to the discussion that follows, each exhibit begins with one or more pages of discussion and technical details for the calculations that it contains. In order to highlight some of the more important aspects of the DCRB's technical analysis, the following discussion will address each of the following topics:

- Treatment of legislative and regulatory changes
- Effects of large losses on the experience analysis
- Estimation of policy year ultimate loss and loss adjustment expense ratios
- Trend provisions: Frequency, Severity
- Determination of the permissible loss ratio for proposed residual market rates
- Considerations regarding the Experience Rating Plan

Unless otherwise stated, the discussion and exhibits use experience from financial data collected by the DCRB in its annual financial data calls. These are the major topics underlying the proposed changes in residual market rates and voluntary market loss costs.

Treatment of Legislative and Regulatory Changes

Four major legislative changes over the last decade have impacted medical expenditures in Delaware: Senate Bill 1 of the 144th General Assembly (SB1), Senate Bill 238 of the 146th General Assembly (SB238), House Bill 175 of the 147th General Assembly (HB175) and House Bill 373 of the 147th General Assembly (HB373). A fifth piece of legislation, House Bill 166 of the 148th General Assembly (HB166), supplemented changes in these other bills. The DCRB does not anticipate any impact on medical expenditures from HB166.

In Filing No. 1603, effective December 1, 2016, all losses underlying the calculations were adjusted to a pre-SB1 basis. This allowed the use of four explicit factors, one for each law, to adjust the final calculations to the laws that would be in effect for policies written in the period December 1, 2016 through November 30, 2017, i.e., post-HB373 (the last of three annual fee schedule changes under HB373 was effective January 31, 2017).

The adjustment of losses to a common baseline in Delaware law allows the analysis of the underlying loss development and loss trend on a basis that is neutral to changes in law.

In this filing, losses are adjusted to a post-HB175, pre-HB373 basis (a "post-HB175" basis). That is, the underlying losses are adjusted to reflect Delaware law after HB175 and prior to HB373. As a result, an explicit factor is used to adjust the final calculations to the law level that will be in effect for policies written from December 1, 2017 through November 30, 2018, i.e., post-HB373. The calculations underlying the adjustment of unlimited losses to a post-HB175 basis are in Exhibit 1 – Unlimited Losses.

The estimated impacts of each of these four laws were provided in previous DCRB filings.

The impact of HB373, as quantified in this filing, is based on the assumption that its provisions will be fully implemented and eventually realized in the medical costs for workers compensation claims in Delaware. The details of DCRB's analysis are contained in Exhibit 35, which has been

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 10 of 20

updated since the previous filing. It is premature to pass judgment on the effectiveness of this legislation toward its ultimate goal of a 33% reduction in medical expenditures. The financial data used in this filing was valued as of December 31, 2016. At that time, the second of three changes in fee schedules had been in place for 11 months. The third and final change was implemented on January 31, 2017. There is not yet sufficient data to analyze the true impact of HB373. The DCRB expects to analyze the impact of HB373 when a full year of data following the last fee schedule change is available. In this filing, the DCRB used the projected impact of the legislated changes under the assumption that they will be fully implemented, estimated to be a 31.41% reduction in projected ultimate medical loss.

Additional details regarding legislative changes can be found in the Appendix at the end of this memorandum.

Effects of Large Losses on the Experience Analysis, Exhibit 1a

The analysis of residual market rates and voluntary market loss costs performed by the DCRB includes methods to reduce the impact of a small number of large claims in a given year. Starting with its annual experience filings effective December 1, 2004, the DCRB has applied procedures that perform loss development and trend analyses on a "limited" basis and then account for the expectation that claims exceeding the selected limit would occur from time to time by adding an excess loss factor to the rate level analysis. This filing has again approached loss development and trend analysis on a limited loss basis.

Loss amounts are stated on a post-HB175 basis. Loss development and trend analyses are conducted using losses at the post-HB175 level. The loss limit was adjusted to be stated on a post-HB373 basis (reflecting benefit levels and system provisions expected to be attained when the successive changes to Delaware's medical fee schedule are completed on January 31, 2017).

The methods and steps regarding loss limits and trend are outlined briefly below:

- 1. The December 1, 2004 loss limit (\$1,288,146 on a post-HB175 basis) and the associated excess loss factor (0.0757) were taken as a key reference point for determination of appropriate loss limitations for this filing.
- 2. Approved excess loss factor tables prior to December 1, 2004 were used to establish loss limitations consistent with an excess loss factor of 0.0757.
- 3. An annual trend rate was computed for the series of loss limits established in step 2 above.
- 4. Loss limits were interpolated for each policy period prior to December 1, 2004 based on the trend in loss limits through December 1, 2004.
- 5. Loss limitations consistent with an excess loss factor of 0.0757 for filings through December 1, 2016 were used to derive a post-2004 annual trend rate.
- 6. Loss limits were projected for each policy period subsequent to December 1, 2004 based on the trend in loss limits through December 1, 2016.
- 7. A series of loss limitations was selected for previous policy years consistent with the trend through December 1, 2004, applied retrospectively from that date and consistent

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 11 of 20

with the trend from December 1, 2004 through December 1, 2016, applied prospectively from December 1, 2004, such that losses were capped at successively lower levels for older policy years, recognizing the impacts of wage and price inflation and potential changes in utilization over time. For policy years prior to 1984, a constant loss limitation of \$339,727 was applied.

- 8. Reported paid and case incurred losses were adjusted as needed to limit underlying loss data to the selected limitations by policy year. These can be found in Exhibit 1 Limited Losses.
- 9. Loss development analysis was performed using the limited loss data produced above.
- 10. Trend analysis was accomplished by dividing the observed limited loss ratios into separate components for claim frequency and claim severity, and prospective trends were selected for each component.
- 11. A loss limitation was selected for the prospective rating period based on the post-2004 projections. This selection was \$2,744,000 on a post-HB175 basis (reflecting benefit levels and system provisions in effect immediately after the implementation of Delaware's medical fee schedule on or about September 1, 2008). This loss limitation was then adjusted to a basis reflecting the effect of HB373, which resulted in a loss limitation of \$1,930,710.
- 12. The portion of losses that the selected loss limitations would be expected to remove from Delaware experience was determined.
- 13. Trended limited loss ratios were adjusted to an unlimited basis by application of an excess loss factor, from which point the rate level analysis could proceed in the usual fashion.

<u>Estimation of Policy Year Ultimate Loss and Loss Adjustment Expense Ratios, Exhibit 2</u> <u>- Limited Losses</u>

Much of the analytical effort required in workers compensation insurance ratemaking is devoted to the evaluation of loss experience from prior periods of time. Results of past experience form a vitally important base of information when developing the prospective estimates in this filing. Since workers compensation losses may be paid out over an extended period of time after the an accident occurs and a claim is filed, results of recent periods of experience must be estimated before ratemaking analysis based on those prior periods of time may proceed.

The DCRB has considered the matter of estimating ultimate policy year loss and loss adjustment expense ratios at length in the preparation of this filing. In evaluating results of the methods in this filing, information gleaned from the DCRB's Unit Statistical Plan data was also taken into account.

In the estimation of ultimate policy year loss ratios for indemnity and medical benefits, the paid loss development method generally gave higher results than the case incurred loss development method. Differences between these approaches varied from policy year to policy year but tended to be larger for some of the most recent policy years.

The DCRB customarily uses a four-year average of age-to-age development factors in its estimation of ultimate loss and loss adjustment expense ratios. In maintaining this process for

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 12 of 20

successive filings, a new year of development experience is added for each filing while a year of development four years prior to the most recent available year is removed from the filing analysis. As a result, three of the same years of development experience are used in any pair of successive filings. The difference in loss development between the respective years being added and dropped influences whether ultimate loss estimates will tend to increase or decrease between successive filing analyses. For this filing the latest available year of development experience available for this filing is Calendar Year 2016. That is, in this filing, the policy years used in the analysis are evaluated at the end of Calendar Year 2016.

As has been the case in recent DCRB filings, a review of Unit Statistical Plan data showed claim closure rates that tended to be deteriorating somewhat over time, historically. However, the most recent data shows some signs of improvement. In addition, a review of the portion of reported losses that have been paid at successive annual stages, from financial data, provides mixed results regarding improvements or deterioration in the length of time for clams to be paid. Exhibit 7 provides both sets of results.

With the benefit of extensive staff review and discussion by the Actuarial Committee, the DCRB has based estimates of ultimate indemnity losses in the filing on the average of the case incurred loss development method and paid loss development applied over as long a development period as is available from the DCRB's data, with case incurred loss development used for the remaining development to an ultimate basis.

Consistent with practices in numerous prior DCRB filings, ultimate loss estimates for this filing have been determined using the average of the results of the case incurred loss development method and the paid loss development method, applied over as long a development period as is available from the DCRB's data.

As in prior analyses, the DCRB used the following approach to smooth fluctuations arising due to the limited volume of data available for the analysis:

- Use of four-year average loss development factors
- Smooth loss development factors using various mathematical models and curves fitted through the observed multi-year averages
- Use trend procedures which rely on multi-year averages rather than individual year ultimate loss and loss adjustment expense ratios

A comparison of results of loss development methods used in the filing may be seen on the enclosed Exhibit 2 – Limited Losses at the top of Page 2.5 for indemnity loss and at the top of Page 2.17 of the same exhibit for medical loss.

Trend Provisions, Exhibit 12

Each DCRB filing applies to a prospective time period. Since historical data is used in the analysis, it is necessary to account for any anticipated changes in loss ratios over the time between the end of the available data and the policy period to which the proposed rates will apply. This is known as "trend" analysis.

Since 2002, the DCRB has used a trend approach that separates policy year loss ratio trends into frequency and severity components. Frequency is measured on the basis of indemnity

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 13 of 20

claims per unit of expected loss at a constant DCRB rate level. The use of expected loss in the calculation of frequency incorporates exposure trend, but is not affected by loss cost changes.

Policy year on-level ultimate loss ratios are adjusted to a series of severity ratios by removing the effects of actual observed changes in the frequency of indemnity claims. The series of resulting severity ratios represent the policy year loss ratios that would have applied if all years had the same claim frequency. The result is a series of indices of claim severity. Loss ratio trends can then be derived as the combined result of separately determined claim frequency and claim severity trends.

In both the frequency and severity trend analyses, the goal is to develop the best estimate of frequency and severity in the upcoming policy period based on recent historical data.

Frequency

Frequency analysis by the DCRB is based on Unit Statistical Data as shown in <u>Exhibit 23</u>. There are two immediate observations. First, in Filing No. 1502, Policy Year 2013 was the most recent year and showed a frequency increase of more than 5.8% when compared to Policy Year 2012. In last year's filing, No. 1603, the increase from Policy Year 2012 to Policy Year 2013 was still apparent at +5.0% but the change from Policy Year 2013 to Policy Year 2014 was a change of -19.2%. With this filing, more mature data shows more tempered changes in direction. The change between Policy Years 2012 and 2013 is an increase of 4.5%, while from 2013 to 2014 the change is -13.5%. The newest data includes Policy Year 2015, which shows a frequency change from Policy Year 2014 of +6.4%. While the year to year changes show opposite sings for these recent policy years, overall frequency continues to decline.

Second, Policy Years 2009 and 2010 continue to show very little change in claim frequency. These policy years are thought to be influenced by recessionary conditions, which may not be representative of conditions in the upcoming policy year. As a result, the DCRB analyzed two trend periods and selected the average of the results of the two analyses for frequency trend. The first analysis uses the seven-point exponential trend in Policy Years 2009 through 2015. The second analysis uses the seven-point exponential trend from 2007 through 2015 with 2009 and 2010 excluded. Adjustments of this type have been used in prior DCRB filings. In DCRB Filing No. 1105, effective December 1, 2011, Policy Year 2009 was treated separately. More recently, the current approach has been used in the DCRB's three most recent annual filings (Nos. 1404, 1502 and 1603).

Given the disjointed nature of available Delaware claim frequency data (generally declining, flat over Policy Years 2009-2010, increasing in Policy Year 2013, decreasing in Policy Year 2014, increasing in Policy Year 2015), the DCRB considered a variety of approaches to estimate claim frequency trend for this filing. The result is a selected frequency trend of -5.0%, which is 1.3 percentage points higher than in Filing No. 1603 (-6.3%).

Severity

In estimating claim severity trends, the DCRB applied both linear and exponential trend models to the policy year severity ratios produced by the loss development methods discussed above. Indemnity and medical ratios were treated separately and, for each method, the linear and exponential models were applied to all possible numbers of policy years from four through ten.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 14 of 20

For indemnity benefits, the DCRB applied a seven-point exponential trend model, which gave a severity trend, based on Policy Years 2009 to 2015, of +4.0%. When combined with frequency trend, the resulting indemnity loss ratio trend is -1.2% per year:

$$0.950 \times 1.040 = 0.988$$

Indemnity loss ratios for this filing were then trended to December 1, 2018, the mid-point of the prospective rating period, by applying the claim frequency and claim severity trends to each of the most recent four policy year loss and loss adjustment expense ratios. The final projected indemnity loss and loss adjustment expense ratio, 0.2617, is based on the average of these four trended policy year indemnity loss and loss adjustment expense ratios.

The same claim frequency trend analysis used for indemnity loss was used for medical benefits. While the DCRB's measure of claim frequency uses only indemnity claims, the vast majority of medical benefits are attributable to indemnity cases. This approach is consistent with prior filings.

The adjudication of the DCRB's December 1, 2009 filing included an adjustment to medical severity trend based on the Department of Insurance's expectation that such trend would be more favorable after the implementation of the Delaware medical fee schedule, due to SB1, than before that transition. Medical severity trend was adjusted with a 1.8% reduction in annual loss ratio or claim severity trend.

Subsequent to the enactment of SB1, it came to light that the regulation of provider charges for hospitals and ambulatory surgical centers intended under that legislation had not been accomplished by virtue of both legal and practical limitations. SB238 addressed these issues by changing the regulation of hospitals and ambulatory surgical centers with a mechanism for adjusting reimbursements from prevailing charges at levels consistent with the original intent of SB1. These changes became effective January 31, 2013.

The DCRB evaluated the impacts of hospital and ambulatory surgical center charges escaping the intended effects of SB1 and found that the trend adjustment would have been 1.5% instead of 1.8% from the implementation of SB1 to the effective date of SB238. These two trend deflections are now included in the underlying experience, which is stated on a post-HB175 basis, as discussed above, and are no longer used to adjust medical severity trend.

The DCRB used a seven-point exponential trend fit through policy year medical claim severity ratios from Policy Years 2009 – 2015, resulting in an annual trend rate of +8.3%. When combined with frequency trend, the resulting medical loss ratio trend is +2.9% per year:

$$0.950 \times 1.083 = 1.029$$

Medical loss ratios for this filing were then trended to December 1, 2018, the mid-point of the prospective rating period, by applying the claim frequency and claim severity trends to each of the most recent four policy year loss and loss adjustment expense ratios. The final projected medical loss and loss adjustment expense ratio, 0.4781, is based on the average of these four trended policy year medical loss and loss adjustment expense ratios.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 15 of 20

<u>Determination of the Permissible Loss Ratio for Proposed Residual Market Rates, Exhibit 9</u>

It is common in preparing workers compensation rate filings to use methods that explicitly recognize investment income in concert with anticipated cash flows, benefit costs and expense needs. The actual methods used differ from jurisdiction to jurisdiction. The DCRB's approach has been to directly compute a permissible loss and loss adjustment expense ratio consistent with an independently established target rate of return. This is the same approach as has been used in previous annual filings.

The prospective determination of an appropriate overall rate of return, which workers compensation insurers should be entitled to earn given the risk they assume in underwriting this line of business, is accomplished by a variety of economic analyses which are generally based on expected returns for businesses subject to risk levels comparable to that of underwriting workers compensation insurance. These methodologies next proceed by establishing a set of cash flows representing the various transactions related to the underwriting of workers compensation insurance. These cash flows include the expected patterns for the receipt of premiums, payment of losses and expenses, use of tax credits and/or payment of tax obligations, and maintenance of surplus funds in support of the business. Expense needs to which the expense cash flows will apply are determined based on historical experience.

Estimates of the probable investment results that an insurer underwriting workers compensation insurance may expect to achieve were made by reviewing existing insurer investment portfolios and prevailing investment returns on various forms of investments in them. Applying these estimates to the cash flows previously established allows an explicit presentation of the effects of investment income throughout the life of a book of workers compensation policies and an estimate of the value of that income to the insurer.

Based on the set of cash flows determined to apply to prospective policies and the estimated parameters of investment yields, federal tax laws, etc., these methods model all expected cash flows over the entire period during which payments attributable to a given policy period are expected to continue. For any given loss provision in rates, the present value of these cash flows can then be consolidated and compared to the target rate of return. The loss provision accomplishing a balance between the expected and target rates of return then becomes the basis for the permissible loss ratio. Within the concept of the Internal Rate of Return (IRR) Model used by the DCRB, the loss provision includes provision for amounts generally related to losses such as loss adjustment expense and loss-based assessments.

This filing, as has been done in previous DCRB filings, recognizes investment income on reserve and surplus funds in determining the overall expected return for carriers from writing workers compensation business in Delaware.

The analysis supporting this filing indicates a needed underwriting profit provision of +1.08%. For Filing No. 1603, the DCRB had derived an underwriting profit provision of +4.00%.

For this filing, the DCRB has again retained an independent economic consultant to perform the above-described analyses. Results of this work are presented in complete detail in Exhibit 9.

Additional expense provisions are shown in <u>Exhibit 8</u> and the expense loading is shown in Exhibit 11.

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 16 of 20

Considerations Regarding the Experience Rating Plan, Exhibits 13, 20, 21 and 27

The DCRB reviews the performance of the Experience Rating Plan as part of its analysis supporting each annual rating value filing submitted to the Department of Insurance. Fluctuations in results of the plan, in particular movement in the average experience modification produced by the plan, are measured and accounted for in the derivation of proposed changes in manual rates and loss costs. This allows the Experience Rating Plan to reallocate premium obligations among insureds based on the merits of their past experience but not either increase or reduce the total amount of premium indicated by the DCRB's benchmark filings of residual market rates and voluntary market loss costs.

The DCRB based the Collectible Premium Ratios used to derive manual rating values for purposes of this filing on the most recent three completed available years of Market Profile data as shown in Exhibit 20. This approach is used to support the proposed collectible rate and loss cost changes and to provide more current recognition of the probable impact of experience rating for the upcoming rating period.

CLOSING COMMENTS AND QUALIFICATIONS

DCRB Filing No. 1701 fully and fairly reflects the most recent available experience indications in Delaware, together with all initial and continuing effects of SB1, SB238, HB175 and HB373. The DCRB respectfully requests a timely review of this filing, allowing implementation on a new and renewal basis **effective December 1, 2017**. A timely review will allow adequate advance notice of final residual market rates and voluntary market loss costs and related rating values to all participants in the Delaware marketplace. Toward that objective, the DCRB will be pleased to answer any questions or provide any available supplementary information which you, your staff and consultants reviewing this filing on your behalf may require.

This filing has been developed by and under the direction of John R. Pedrick, FCAS, MAAA and Kenneth M. Creighton, ACAS, MAAA. They both meet the Qualification Standards of the American Academy of Actuaries to provide the actuarial opinion contained within this filing.

APPENDIX – LEGISLATIVE CHANGES

Here is a brief summary of the major legislative changes in Delaware over the last decade.

Senate Bill 1, 144th GA

SB1 was signed into law on January 17, 2007. This was a landmark piece of legislation, creating several features of the health care payment system in Delaware. It included the following notable components:

- Established a Health Care Advisory Panel
- Provided for a health care payment system intended to control health care costs in connection with workers compensation
- Provided for the establishment of health care practice guidelines
- Provided for the development of certification standards for health care providers treating employees in the workers compensation system
- Provided for the adoption of forms and a consistent and uniform reporting system among employees, employers, insurance carriers and health care providers
- Adopted standards for billing and payment of health care services
- Required contractors and other parties doing substantial work within Delaware to adequately insure their employees for workers compensation under the laws of Delaware
- Authorized payment of indemnity benefits or health care benefits without prejudice against the right to later contest the employer's obligation to pay the expense in question
- Established new procedures for attorney fees in workers compensation matters
- Clarified the obligations of independent contractors and subcontractors with respect to maintaining workers compensation insurance
- Clarified the calculation of wage rates, especially in cases where employees had limited work histories
- Implemented procedures for the collection of data relevant to workers compensation including injury reports, mandatory insurance requirements and health care treatments and costs

Senate Bill 238, 146th GA

SB238 was signed into law on August 7, 2012, and revised procedures used to determine payments to hospitals and ambulatory surgery centers for services provided to workers compensation claimants. SB238 made technical improvements to the changes in SB1.

House Bill 175, 147th GA

HB175 was signed into law on June 27, 2013, arising from work done by the Workers' Compensation Task Force created by House Joint Resolution 3.

House Bill 373, 148th GA

HB373 was signed into law on July 15, 2014, and included the following notable components:

A 33% reduction in medical expenditures phased in over a three-year period (20%, 5% and 8%)

The Honorable Trinidad Navarro State of Delaware DCRB Filing No. 1701 August 4, 2017 Page 18 of 20

- Imposed caps expressed as percentages of Medicare per-procedure reimbursements beginning on January 31, 2017
- Revised certain procedures pertaining to the position of Ratepayer Advocate

House Bill 166, 148th GA

HB166 was signed into law on July 27, 2015, and included the following provisions:

- Defined "health care provider" for purposes of §2301
- Allowed recognition of savings other than fee schedule changes in accomplishing the reductions in medical expenditures required by HB373
- Modified procedures applicable to the reimbursement for medical treatment and procedures performed outside Delaware
- Authorized the Workers Compensation Oversight Panel to adopt rules requiring electronic medical billing and payment processes and to standardize documentation required for billing adjudication
- Provided for the certification of healthcare providers not licensed by Delaware
- Made the utilization review program applicable to health care providers regardless of whether such providers are certified under §2322D

EXHIBIT II

EXPENSE LOADING

| | Current % | Proposed % |
|----------------------------------|-----------|------------|
| LOSS AND LOSS ADJUSTMENT EXPENSE | | |
| Losses | 56.50 | 58.38 |
| Loss Adjustment Expense | 11.59 | 12.18 a |
| Loss & Loss Adjustment | 68.09 | 70.56 |
| UNDERWRITING EXPENSES | | |
| Commission | 5.56 | 5.38 |
| Other Acquisition | 2.56 | 2.39 |
| General Expenses | 3.63 | 3.26 |
| Premium Discount | 8.62 | 8.38 |
| State Premium Tax | 2.00 | 2.00 |
| Other State Tax | 0.32 | 0.33 |
| Uncollectible Premium | 1.32 | 1.10 |
| Administrative Assessment | 1.90 | 2.52 b |
| Workers Compensation Fund | 2.00 | 3.00 |
| Deviations | 0.00 | 0.00 |
| Policyholder Dividends | 0.00 | 0.00 |
| Underwriting Profit | 4.00 | 1.08 |
| Underwriting Expense Total | 31.91 | 29.44 |

a - As ratio to loss, Loss Adjustment Expense = 0.2087

RESIDUAL MARKET MINIMUM PREMIUM:

It is proposed that the Minimum Premium formula remain at

(265 * Rate) + Expense Constant

It is proposed that the Minimum Premium be subject to a Maximum Minimum Premium of \$2000. It is proposed to use a multiplier of 132.50 in the Minimum Premium formula for the Farm Classes, (0006, 0016, 0034, 0036, 0083).

RESIDUAL MARKET EXPENSE CONSTANT:

It is proposed that the expense constant remain at \$295.

b - As ratio to loss, Administrative Assessment = 0.0431

NOTE: So as to maximize the use of available data, the companies used in one stage of development were allowed to be independent of those used in the other stage of development; therefore, the figures shown at each valuation may vary.

2016

6,603,857

^{*} Losses limited on a per-claim basis, with the actual limitation varying by policy year as described in Exhibit 1a.

Losses are expressed on a post-HB175, pre-HB373 basis.

EXHIBIT VIII DELAWARE COMPENSATION RATING BUREAU, INC. RATE AND LOSS COST FORMULAE

The experience used for classification relativities for the December 1, 2017 revision will include all available risks. It is proposed that catastrophes be limited in accordance with the procedure previously employed in other DCRB filings. The experience period will be five (5) years for all classifications regardless of whether a classification might meet the full credibility requirements with less than five years of data. Credibility will be based on reported payrolls for classifications using payroll as the exposure base. For non-payroll classifications, expected losses will be used as the basis for credibility. Thus, two credibility tables will be prepared for use in the December 1, 2017 filing. The values for these respective tables will be established such that the credibility assigned to a payroll-based classification having the same portion of total statewide expected losses and payrolls attributable to its experience using each table would be equal. All occupational disease losses will be included in the exhibit of classification experience, with the total amount of such losses by type of injury being shown on a separate line on the classification rate worksheets.

The larger classifications are subject to standard procedures as described below. However, circumstances will sometimes require that some classifications' rating procedure be modified to recognize situations where the normal rating process would not be appropriate. Such classifications, and the manner in which their rates or loss costs have been derived, are separately identified within the filing material.

The calculation of assigned risk classification rates will be made in accordance with the following procedure:

- (1) Determine the pure premiums underlying present Manual Residual Market Rates by category (serious, non-serious, medical only and total) for each classification.
- (2) Adjust the present pure premiums by category (serious, non-serious, medical only and total) to the December 1, 2017 on-rate-level to obtain present on-rate-level pure premiums.
- (3) Determine Expected Losses (serious, non-serious, medical only and total) for each classification by multiplying the exposures from the experience period by the pure premiums underlying present Manual Rates.
- (4) Determine the indicated pure premiums (serious, non-serious, medical only and total) from the exposures and losses from the experience period.
- (5) Test the indicated total pure premiums by multiplying the exposures of the latest three years for each classification and obtaining the total Actual Losses for all classifications combined.
- (6) Calculate Expected Losses by multiplying the present pure premiums by the exposures from the last three years for each classification and by the overall average rate change.
- (7) Obtain correction factors by category of loss (serious, non-serious and medical only) by dividing the Expected Losses derived in (6) by the Actual Losses derived in (5).
- (8) Multiply the indicated (pre-test) pure premiums from (4) times the correction factors derived in (7) to obtain indicated (post-test) pure premiums.

RATE AND LOSS COST FORMULAE (continued)

- (9) Determine "formula" pure premiums from (2) and (8) above for each type of loss (serious, non-serious and medical only), with credibility for each category of loss corresponding to either the amount of reported payroll (for all classifications in which payroll is the exposure base) or to the amount of Expected Losses (for all "non-payroll" classifications). Credibility weights will be taken from exhibits appearing in the Class Book. The complement of credibility is in each case to be assigned to the present on December 1, 2017 level pure premiums for each category of loss.
- (10) Select proposed total pure premiums for each classification, using the middle value from the total pure premiums derived in (2), (8) and (9) above. If the proposed pure premium selected on this basis is different from the formula pure premium derived in (9) above, partial pure premiums are to be allocated between categories (serious, non-serious and medical only) in the same proportion as the partial pure premiums comprising the formula pure premium.
- (11) Test the proposed total pure premiums selected in (10) by multiplying by the exposures of the three latest years for each classification and obtaining the total Expected Losses for all classifications combined.
- (12) Obtain a correction factor by dividing the Expected Losses derived in (6) above by the Expected Losses derived in (11) above.
- (13) Calculate the "composite pure premium multipliers" for each industry group as the product of the following items:
 - (a) The pure premium correction factor determined in (12) above.
 - (b) The proposed experience rating plan off-balance factor (Collectible Premium Ratio).
 - (c) The inverse of the permissible loss and loss adjustment ratio.
 - (d) The estimated effect of the July 1, 2018 benefit change.
- (14) Apply the composite pure premium multiplier obtained in (13) above to the proposed total pure premiums to obtain Manual Rates.
- (15) Test to assure that the maximum departure of the Manual Rates derived in (14) above from current Manual Rates is in accordance with the following parameters:

Maximum Change in Rates:

Upward: The industry group average change plus 25% rounded to the nearest 1%.

Downward: The industry group average change minus 25% rounded to the nearest 1%.

- (16) Manual rates are to be rounded to the nearest \$.01.
- (17) Test the Manual Rates derived in (16) above to determine if balance has been achieved within 0.0005 of the indicated change in rate level by industry group. If such balance has not been achieved, calculate the necessary correction factor to adjust the composite pure premium multipliers derived in (13) above to achieve the necessary balance. Perform steps (14) through (17) iteratively until the desired balance is achieved.

RATE AND LOSS COST FORMULAE (continued)

Non-reviewed Classifications

(18) For classifications with insufficient credibility (non-reviewed classifications), an alternative calculation is used to derive indicated rates.

Insufficient credibility is defined as having five-year payroll less than that necessary to achieve 5% credibility for the non-serious component of pure premium. For non-payroll based classifications, expected losses replace payrolls.

For these non-reviewed classes, the indicated rate is calculated as follows:

- a) An average loss cost using Pennsylvania loss cost values and the Delaware distribution of business by class is calculated.
- b) Classification relativities are then calculated that relate the Pennsylvania loss cost by classification to the average overall loss cost calculated in (a) above.
- c) Indicated average loss costs are calculated by class by multiplying the relativities in (b) above times the average Delaware loss cost value for all classes combined times the average manual change in rates times the indicated composite pure premium multiplier.
- d) A second indicated rate is calculated by applying the average manual change in rates by industry group to the current Delaware rate for the class.
- e) A final indicated rate, subject to capping and balancing criteria previously described, is calculated by applying one-third weight to (c) above plus two-thirds weight to (d) above.

Loss Costs

The calculation of non-assigned risk classification loss costs will be made in accordance with the following procedure:

(19) Multiply the proposed assigned risk Manual Rates by classification by the permissible loss, loss adjustment expense and loss based assessment ratio.

EXHIBIT IX

COLLECTIBLE PREMIUM RATIOS *

Manual Years 2014 to 2016 Market Profile Report Data

| Manual Year | Premium at Manual Rates | Collected Premium (Excluding Constants) | Collectible Premium Ratio (2)/(3) |

EXHIBIT XI

CALCULATION OF TAX MULTIPLIER FOR USE IN RETROSPECTIVE RATING PLANS (O/T U.S.L. & H.W. Act Coverages)

Expense Provisions for O/T U.S.L. & H.W. Classes

| Losses | 58.38 |
|----------------------------|-------|
| Loss Adjustment Expense | 12.18 |
| Loss & Loss Adjustment | 70.56 |
| D : D: . | 0.00 |
| Premium Discount | 8.38 |
| Acquisition | 7.77 |
| General Expenses | 3.26 |
| Profit and Contingencies | 1.08 |
| Taxes | 2.33 |
| Uncollectible Premium | 1.10 |
| Workers' Compensation Fund | 3.00 |
| Administrative Assessment | 2.52 |
| | 29.44 |

lf

T = Tax multiplier

E = Expense provision in rates (General, Acquisition, and Profit), less premium discount

L = Loss provision in rates

C = Loss conversion factor

B = Assessments made on premiums

A = Assessments made on losses (adjusted so as not to collect profit and general expense dollars on the extra premium generated by the assessments)

Using average discount (Schedule Y) this yields:

$$ACQ \qquad GEN \qquad PROFIT \qquad PREM DISC$$

$$E = 0.0373 = 0.0777 + 0.0326 + 0.0108 - 0.0838$$

$$A = 0.0418 = 0.0431 \times \frac{1 - 0.0373 - 0.0643}{1 - 0.0099 - 0.0643}$$

Then

$$T = E + L (1 + C + A)$$
 $X = \frac{1}{1 - B - S}$

$$T = \underbrace{\begin{array}{ccc} 0.0373 + 0.5838 & (1 + 0.2087 + 0.0418) \\ 0.0373 + 0.5838 & (1 + 0.2087) \end{array}}_{} x \underbrace{\begin{array}{ccc} 1 \\ 1 - 0.0643 - 0.0255 \end{array}}_{} = \underbrace{\begin{array}{ccc} 1.1347 \\ 1 - 0.0643 - 0.0255 \end{array}}_{}$$

EXHIBIT XII

DELAWARE RETROSPECTIVE DEVELOPMENT FACTORS *

Retrospective development factors for first, second and third adjustments are calculated below. They are intended for use in retrospective plans with no loss limitation and applicable to the expected loss portion of premium.

| First Adjustment | RDF = | 0.5936 |
|-------------------|-------|--------|
| Second Adjustment | RDF = | 0.4595 |
| Third Adjustment | RDF = | 0.3797 |

For those companies using retrospective development factors with loss limitations, the following formula may be used.

$$RDF(LIM) = (1.0 - ELF) \times RDF$$

RDF(LIM) = Retrospective Development Factors at limited basis ELF = Excess Loss (Pure Premium) Factors exclusive of allocated loss adjustment expenses for given Hazard Group and Loss Limitation RDF = Retrospective Development Factors without Loss Limitation

For Example:

First Adjustment RDF =
$$(1 - 0.651) * 0.5936 = 0.2072$$

^{*} The use of retrospective development factors is optional.

Table I - Summary of Financial Call Data

Table I presents premium and loss data which forms the basis for calculating development factors and projecting ratios of actual losses to premiums by policy year. Losses are shown on paid and case incurred (paid plus outstanding, excluding bulk and IBNR) bases split between indemnity and medical.

The data represents a summary of accumulated policy year experience as reported by carriers in the annual Financial Calls for Experience. Individual losses have been limited by amounts varying by policy year and the limits apply on a combined indemnity and medical loss basis for both paid and incurred losses. The loss limitations by policy year are derived and shown in Exhibit 1a. The excess portions of those limited losses are shown in Exhibit 1b and have been excluded from Exhibit 1. All medical payments and reserves are adjusted to a post-House Bill 175, pre-House Bill 373 benefit level consistent with losses adjusted in Exhibit 1 on an unlimited basis. Medical data has also been adjusted to reflect the anticipated improvements in medical trend due to Senate Bill 1 and Senate Bill 238.

Four sets of development factors are shown, measuring the development from December 31, 2012 to December 31, 2013; December 31, 2013 to December 31, 2014; December 31, 2014 to December 31, 2015; and December 31, 2015 to December 31, 2016. So as to maximize the use of available data, the companies used in each stage of development are allowed to be independent of those used in other stages of development; therefore, the figures shown for a given valuation date may vary for purposes of comparison to the prior and subsequent points.

Experience for large deductible policies has been excluded from Table I.

ACCUMULATED STANDARD EARNED PREMIUM

2016

6,603,857

^{*} Losses limited on a per-claim basis, with the actual limitation varying by policy year as described in Exhibit 1a. Losses are expressed on a post-HB175, pre-HB373 basis.

Excess Loss Ratios and Loss Limitations

Page 1 shows a history of loss limits consistent with an excess loss ratio of 0.0757 for excess loss factor revisions since 1981, the 0.0757 ratio corresponding to a loss limit of \$1,288,146 (on a post-House Bill 175, pre-House Bill 373 basis) effective with the December 1, 2004 filing when a limited loss approach was first introduced. An exponential curve fit to the loss limitations from 1981 to 2004 showed an average annual change of 6.27% in loss limits, which is applicable to Policy Years December 1, 2004 and prior.

After review of recent changes in loss limitations, an average annual change of 5.99% was selected for policy periods after December 1, 2004.

Page 2 shows the calculation of loss limits by policy year tied to a limit of \$2,744,000 for policies effective during the twelve months beginning December 1, 2017 and with the underlying annual changes in the loss limit as described above.

All calculations on pages 1 and 2 are made on a post-House Bill 175, pre-House Bill 373 basis and indicate that a loss limit of \$2,744,000 is appropriate for the policy period beginning December 1, 2017.

The DCRB developed overall empirical distributions using Delaware data with losses adjusted to both post-House Bill 175, pre-House Bill 373 and post-House Bill 373 bases. A comparison of these distributions indicated that a post-House Bill 175, pre-House Bill 373 loss limit of \$2,744,000 produced an excess loss factor comparable to a post-House Bill 373 loss limit of \$1,930,710.

Page 3 shows the calculation of the excess loss ratio consistent with a loss limitation (post-House Bill 373) of \$1,930,710 per claim in the current filing. Excess ratios, prior to adjustments for expense and risk load, are weighted with standard premiums by hazard group to get an average excess ratio of 0.0817.

Delaware December 1, 2017 Rate & Loss Cost Filing Loss Limitations for Excess Loss Factor = .0757 All Losses at Post-HB175, Pre-HB373 Levels

Applicable to policy years beginning 12/1/2004 and Earlier

| TOTAL | 706,116,992 | 0.0817 |

^{# \$1,930,710} represents a loss limit on a post-House Bill 373 basis consistent with a post-House Bill 175, pre-House Bill 373 loss limit of \$2,744,000.

Table I - Reported Losses in Excess of Loss Limitations

The data represents a summary of reported losses in excess of the per claim loss limits derived in Exhibit 1a. These amounts were removed from the Table I – Unlimited Losses, resulting in the values shown in Exhibit 1, Table I – Limited Losses.

Medical payments and reserves are all expressed on a post-House Bill 175, pre-House Bill 373 basis consistent with both the limited and unlimited versions of Exhibit 1.

NOTE: So as to maximize the use of available data, the companies used in one stage of development were allowed to be independent of those used in the other stage of development; therefore, the figures shown at each valuation may vary.

^{*} Losses limited on a per-claim basis, with the actual limitation varying by policy year as described in Exhibit 1a.

Paid and Incurred Loss Development and Trend – Limited Losses

Page 1 of the attachment shows the calculation of Standard Earned Premiums. Standard Earned Premiums are developed to ultimate, adjusted to current residual market rate level and adjusted to remove the impact of expense constants, the DCCPAP program and the residual market surcharge program.

Pages 2 through 13 present indemnity losses and loss adjustment expense.

Page 2 shows incurred and paid loss development factors and ratios of incurred to paid losses, based on the current Table I. An average of the latest four factors is shown. Selected factors are generally based upon a fitting of the four-year averages to a curve.

Page 3 arranges the factors according to the loss development approach shown. There are three methods: case incurred, paid to twenty-seventh and the average of the incurred and paid to twenty-seventh methods. The last section of page 3 shows the loss on-level and loss adjustment expense factors applicable.

Page 4 shows the loss base (paid or incurred losses depending on the method) to which the development factors apply, the projected ultimate level of losses, and ultimate losses adjusted to current benefit levels and including loss adjustment expense.

The top portion of page 5 presents ultimate on-level loss and loss adjustment expense ratios by policy year for each methodology. The middle portion of page 5 presents information on claim frequencies, which are further discussed in Exhibit 23. The first column shows frequencies by policy year. The second column shows normalized values for claim frequency with Policy Year 2003 set equal to unity. Staff selected a frequency trend factor of -5.0%. This trend factor is the arithmetic average of the seven-point frequency trend factor (Policy Years 2009 through 2015) and the seven-point frequency trend factor (Policy Years 2007 through 2015 excluding Policy Years 2009 and 2010). The lower portion of page 5 shows severity ratios which are defined herein as loss ratios adjusted to a common underlying claim frequency level. The severity ratios are calculated by dividing the loss ratios in the top section of page 5 by the normalized claim frequencies in the middle portion of page 5 for each policy year and loss development approach.

Page 6 shows fitted values for severity ratios fitted to a straight line for each loss development approach and using from 4 to 10 points. The top portion of page 7 shows those same straight lines trended to the midpoint of the prospective rating period (12/1/18). The second section of

page 7 shows severity trend factors by policy year calculated by dividing the trended points on page 7 by the fitted values on page 6.

Pages 8 and 9 present the analogous exponential severity trend factor calculation. Pages 10 and 11 show the loss ratio trend factors by policy year which are a product of the severity (pages 7 and 9) and frequency (page 5) trend factors that were previously calculated.

Pages 12 and 13 show averages of the four latest policy years trended to the midpoint of the prospective rating period (12/1/18) on a linear and exponential basis, respectively.

Pages 14 through 25 show experience for medical loss and loss adjustment expense laid out the same way as pages 2 through 13 while pages 26 and 27 show a summary of annualized severity and loss ratio trend factors.

Graphs of Selected Loss Development Projections – Limited Losses

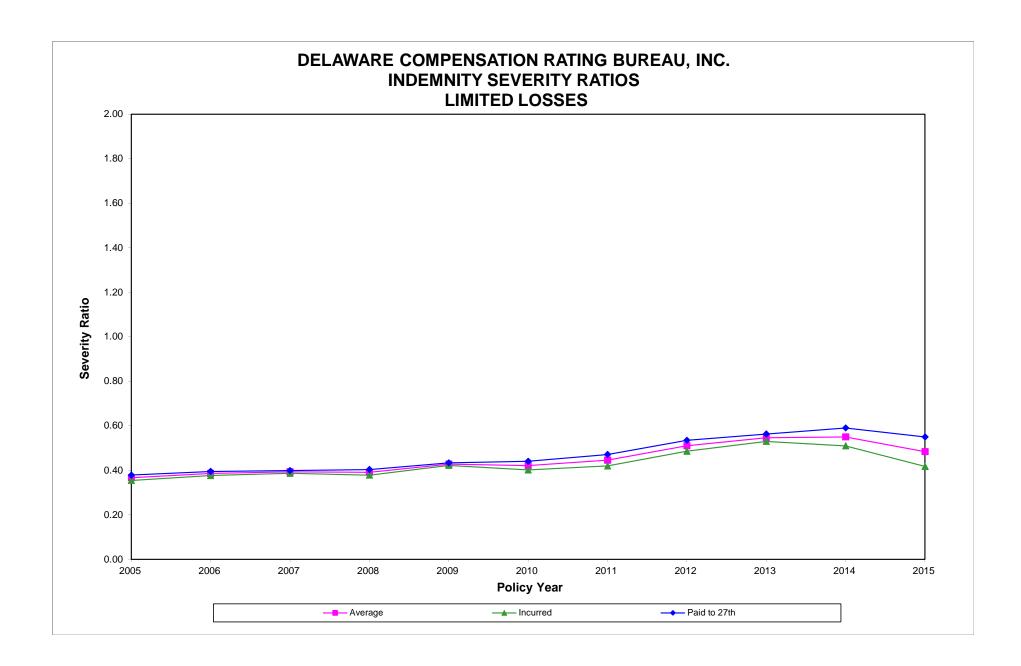

Pages 1 and 2 of this exhibit show graphs of loss and LAE ratios for indemnity and medical derived from the following selected loss development approaches:

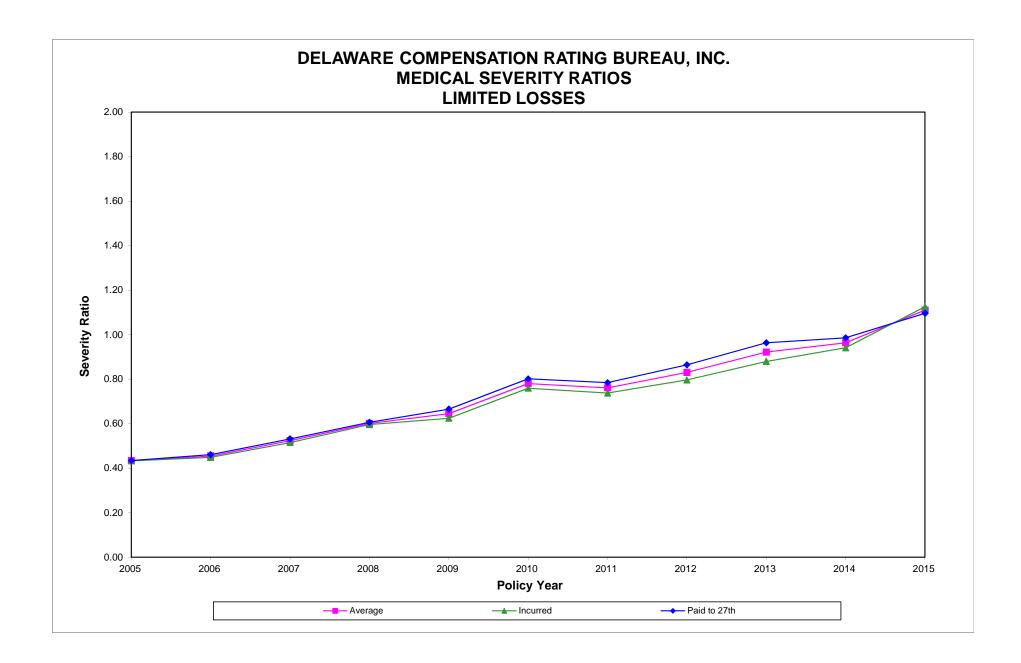

- Average of Incurred and Paid to 27th
- Incurred
- Paid to 27th

Pages 3 and 4 of this exhibit show graphs of severity ratios for indemnity and medical for the same selected loss development approaches.

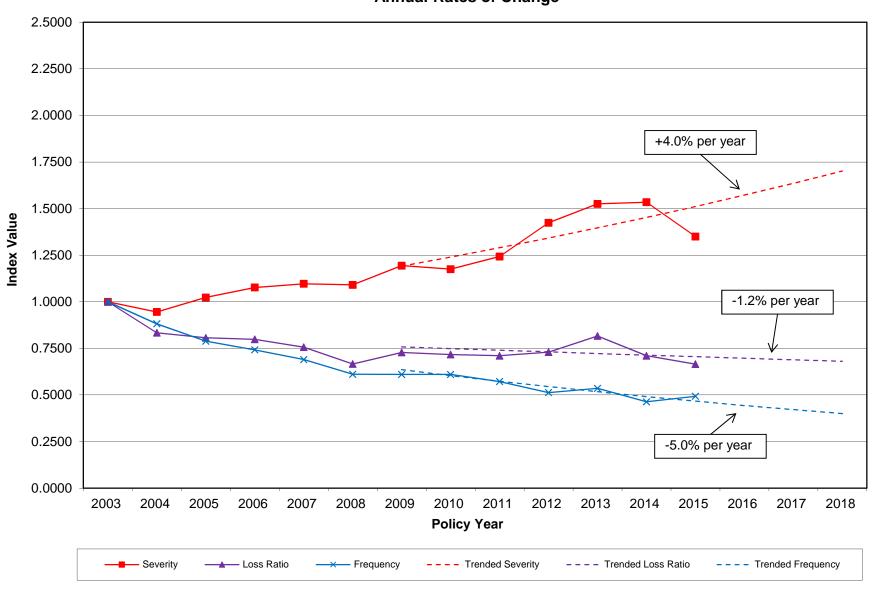

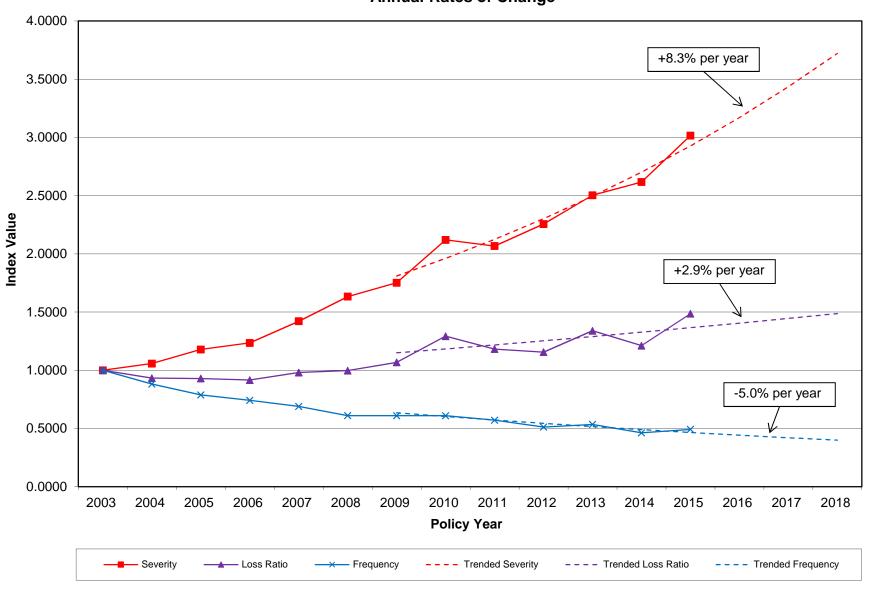

Graphs of Ultimate and Trended Experience Components

This exhibit shows graphs of trended loss and loss adjustment expense ratios for indemnity and medical as well as their frequency and severity components. Please note that frequency, severity and loss ratio are all expressed on a normalized basis with Policy Year 2003 set equal to unity.

Indemnity Loss Experience Components Indexed to 1.0000 at Policy Year 2003 Annual Rates of Change

Medical Loss Experience Components Indexed to 1.0000 at Policy Year 2003 Annual Rates of Change

Open Claim Ratios, Payout Ratios and Average Claim Costs

Page 1 lists the ratio of the number of open indemnity claims to the number of reported indemnity claims - by policy year and report level. Page 2 lists the claim frequency per \$1,000,000 of payroll - the ratio of the number of indemnity claims reported to payroll. These values are taken from the unit statistical data.

Pages 3 through 6 list the ratios of reported paid losses to incurred losses, by policy year and maturity level separately for indemnity and medical (adjusted to a post-House Bill 175, pre-House Bill 373 basis) losses. Pages 3 and 4 relate paid losses to reported case incurred losses. Losses on page 3 are unlimited and losses on page 4 are limited. Pages 5 and 6 relate payments to projected ultimate incurred losses with ultimate losses derived using the average of paid and incurred methods for indemnity and medical, which is the basis for staff loss development projections in this proposal. Losses on page 5 are unlimited and losses on page 6 are limited.

Pages 7 through 10 show the average costs for open, closed and incurred claims by policy year and report level. Pages 7 and 8 are for indemnity and pages 9 and 10 are for medical on indemnity. These values are calculated from unit statistical data and have not been adjusted for the effects of legislation.

Denotes highest open claim ratio shown for each report level.

Expense Study

The following exhibits are used in the development of specific expense provisions to be used in the DCRB's proposed filing. The provisions are for commission & brokerage, other acquisition, general and loss adjustment expense, premium discount and uncollectible premium.

Exhibit I of the attachment presents summary figures for standard earned premium, general expense and total production costs from the last three calendar years. The data is obtained from Financial Call #2 submissions for 2013 - 2015 for stock agency companies only, and has been adjusted to include the experience for large deductible policies.

Exhibit I-A develops standard earned premium on both net and gross bases after adjusting for large deductible policies and removing expense constant dollars.

Exhibit II shows the development of the expense constant offset that is carried forward to Exhibit I.

Exhibit III shows the calculation of the loss adjustment expense provision as a function of incurred losses. The loss adjustment expense factor is based on all-company experience and is developed from the same source of data as Exhibit I above. We selected a three-year average of loss adjustment expense ratios to direct incurred losses including large deductible losses on a gross basis.

Exhibit IV-A shows the development of an average provision for premium discount based upon the Schedule Y premium discount table. The data used by the DCRB for this purpose is Unit Statistical Plan data. This exhibit forms the basis for Exhibits IV-B, which develops the average interstate premium discount for Schedule Y companies.

Exhibit V develops the provision for uncollectible premium based on the ratio of uncollectible premium to gross written premium. The data used is courtesy of NCCI, Inc.

DELAWARE COMPENSATION RATING BUREAU, INC.

Internal Rate of Return Model

The attached pages present exhibits and a description of the internal rate of return model used in deriving the DCRB loss ratio (including loss adjustment expenses and loss-based assessments) and provision for profit and contingencies.

DELAWARE COMPENSATION RATING BUREAU, INC. DELAWARE DECEMBER 1, 2017 RESIDUAL MARKET RATE FILING

Internal Rate of Return Analysis

The following pages present results of an economic analysis establishing the following items:

- The appropriate rate of return for writing workers compensation business, and
- The loss ratio (including loss adjustment expenses and loss-based assessments) which will allow the realization of that target rate of return in current economic conditions, based on current expense needs for stock carriers and cash flows for losses and expenses attendant with Delaware workers compensation insurance.

Internal Rate of Return Table I shows Inputs, Assumptions and Outputs underlying the analysis.

Internal Rate of Return Tables II - VII show the various cash flows projected for the underwriting of Delaware workers compensation business based on the inputs to the Internal Rate of Return model, assuming a base standard premium at DCRB level of \$1 million.

Exhibits titled "Delaware Pre & Post Tax Returns" and "Delaware Cost of Capital" present the derivation of the appropriate current target rate of return, which is 8.71 percent. Both Capital Asset Pricing Model ("CAPM") and Discounted Cash Flow ("DCF") analyses have been applied in the derivation of this target rate, producing results of 8.46 and 8.96 percent, respectively. The selected target rate of return, 8.71 percent, is the average of these two separate indications

INTERNAL RATE OF RETURN ANALYSIS STATE OF DELAWARE - 2017

TABLE III: CASH FLOW FOR LOSS AND UNEARNED PREMIUM RESERVES PAGE 1

Column (1) Premium Collected based on collection pattern from Table II, Column (1).

Example: $$916,200 \times .000023 = 21.07

Column (2) Agents' Balances reflects the difference between Written Premium and Collected Premium. Written Premium pattern provided by the DCRB for Delaware workers compensation insurance.

Example: Written Premium, First Quarter = .25 x \$916,200 = \$229,050.00 Collected Premium = (.000023 + .002135) x \$916,200 = \$1,977.16 Written - Collected = \$227,072.84

- Column (3) Overdue Agent's Balances are all Agents' Balances due after the end of the 24-month period in which earnings of policy year premium occurs.
- Column (4) Admitted Agents' Balances reflect all Agents' Balances due prior to the end of the 24-month period in which earnings of policy year premium occurs.
- Column (5) Losses Incurred is computed by applying the loss ratio for the business to earned premiums at DCRB level (i.e., before premium discounts). Premium earning pattern provided by the DCRB for Delaware workers compensation insurance.

Example: $.7308 \times 1,000,000 \times .0328 = 23,970.24$

Column (6) Unearned Premiums is computed as Cumulative Written Premium less Cumulative Earned Premium.

Example: \$239,219.82 - 30,051.36 = \$209,168.46

Column (7) Total Premium Net of Reserves is computed as Collected Premium plus Admitted Agents' Balances less Losses Incurred less Unearned Premium Reserves.

Example: \$1,977.16 + 227,072.84 - 23,970.24 - 209,168.46 = -\$4,088.70

TABLE III: CASH FLOW FOR LOSS AND UNEARNED PREMIUM RESERVES PAGE 2

Column (8) Premium Net of Reserves is the periodic change in Column (7).

Example: -\$4,088.70 - 0 = -\$4,088.70

Column (9) Cumulative Written Premium is total written premium times the cumulative written premium distribution (Table II, column (9)).

Example: $$916,200 \times .2611 = $239,219.82$

Column (10) Cumulative Earned Premium is total earned premium times the cumulative earned premium distribution (Table II, column (10)).

Example: $$916,200 \times 0.0328 = $30,051.36$

TABLE IV: TAX CREDITS AVAILABLE FROM UNDERWRITING OPERATIONS PAGE 1

Column (1) The net written premium underlying the model, i.e., \$1 million less premium discounts, or \$916,200.00.

Column (2) The periodic change in the Unearned Premium Reserve shown in Table III, Column (6).

Example: \$441,883.26 - 0 = \$441,883.26

Column (3) The sum of the products of the expense flows shown in Table II and their associated expense provisions as shown on Table I, multiplied times the premium base.

Example:

| Item | Provision (%) | Year 1 Expense Flow | Year 1 Expense Ratio % | Premium Base | Year 1 Expense \$ |
|--------------------|------------------|---------------------------|------------------------------|-----------------|-----------------------|
| | (a) | (b) | (c)=(a)*(b) | (d) | $(e)=(c)^*(d)$ |
| Commission | 5.38 | 0.002706 | 0.014558 | 1,000,000 | 14,558.28 |
| General Expense | 3.26 | 0.007500 | 0.024450 | 1,000,000 | 24,450.00 |
| Other Acquisition | 2.39 | 0.010000 | 0.023900 | 1,000,000 | 23,900.00 |
| Other Tax | 0.33 | 0.010000 | 0.003300 | 916,200 | 3,023.46 |
| Uncollectible Prem | 1.10 | 0.002706 | 0.002977 | 916,200 | 2,727.16 |
| Tax 1: | 2.00 | 0.010000 | 0.020000 | 916,200 | 18,324.00 |
| Tax 3: | 3.00 | 0.010000 | 0.030000 | 916,200 | 27,486.00 |
| Total | | | | | 114,468.90 (round) |

Column (4) & The Losses Paid for Accident Years 1 and 2, respectively, are based on Column (5) payout patterns provided by the DCRB for Delaware workers compensation insurance.

Example: Accident Year 1, Year 1 Payout

 $(.0878 / 2) \times .7308 \times \$1,000,000 = \$32,082.12$

TABLE IV: TAX CREDITS AVAILABLE FROM UNDERWRITING OPERATIONS PAGE 2

- Column (6) The IRS Discount Factors are a tabulation of discount factors published for carriers by the Internal Revenue Service.
- Column (7) & The Losses Discounted for Accident Years 1 and 2, respectively, are the Column (8) change in discounted reserves for each accident year implied by the loss ratio, premium earnings pattern and IRS discount factors incorporated into the model.

Example: Accident Year 1, Year 2 Losses Discounted

Accident Year 1 Incurred at End of Year 2: \$378,371.70

Accident Year 1 Paid Through Year 2:

\$32,082.12 + 74,285.82 = \$106,367.94

Accident Year 1 Undiscounted Reserve, Year 2:

\$378,371.70 - 106,367.94 = \$272,003.76

IRS Discount Factor: .8574

Accident Year 1 Discounted Reserve, Year 2:

 $272,003.76 \times .8574 = 233,216.02$

Accident Year 1 Incurred at End of Year 1: \$378,371.70

Accident Year 1 Paid Through Year 1: \$32,082.12

Accident Year 1 Undiscounted Reserve, Year 1:

\$378,371.70 - 32,082.12 = \$346,289.58

IRS Discount Factor: .8755

Accident Year 1 Discounted Reserve, Year 1:

 $$346,289.58 \times .8755 = $303,176.53$

Change in Discounted Reserves, Year 1 to 2: \$233,216.02 - 303,176.53 = -\$69,960.51 (round)

Column (9) Tax Credits are computed as follows:

Underwriting Tax Rate x

- (Written Premium
 - + 0.8 x Change in Unearned Premium
 - + Expenses Paid
 - + Losses Paid
 - + Change in Discounted Loss Reserve)

ASSIGNED RISK INTERNAL RATE OF RETURN ANALYSIS STATE OF DELAWARE - 2017

TABLE V: NET CASH FLOWS FROM UNDERWRITING

Column (2) and subtracting Column (3).

Column (1) The Premium Flow Net of Reserves is Column (8) of Table III.

Column (2) Tax Credits from Underwriting is a quarterly flow of those credits in Column (9) in Table IV.

Column (3) Expenses show a quarterly flow of Expenses prepared in the same fashion as the annual flows in Column (3) of Table IV.

Column (4) Dividends are not used in this model as no provision has been made for dividends in this analysis.

Column (5) Net Cash Flow from Underwriting is computed by adding Column (1) and

169,211.66 10,522.42

TABLE VI: DERIVATION OF FUNDS IN SURPLUS ACCOUNT

Column (1) Loss and Loss Adjustment Reserves is the difference between Losses Incurred (Column (5), Table III) and Losses Paid (Columns (4) and (5), Table IV).

Example: \$378,335.16 - 32,082.12 = \$346,253.04

- Column (2) Unearned Premium Reserves is Column (6) of Table III.
- Column (3) Admitted Agents Balances is Column (4) of Table III.
- Column (4) Cash Level is computed by adding Columns (1) and (2) and subtracting Column (3).

Example: \$346,253.04 + 441,883.26 - 668,233.22 = \$119,903.08

Column (5) Funds in Surplus Account is derived by adding Columns (1) and (2) and dividing that total by the reserve-to-surplus ratio used in the model, in this case, 1.92.

Example: (\$346,253.04 + 441,883.26) / 1.92 = \$410,487.66

TABLE VII: NOMINAL CASH FLOWS TO INVESTORS

- Column (1) Net Cash Flow Underwriting is Column (5) of Table V.
- Column (2) Cash Pre-Tax Income is computed by multiplying the pre-tax investment yield rate times the periodic average Cash Level from Column (4), Table VI.

Example: (\$71,778.59 + 119,903.08) / 2 = \$95,840.83 $$95,840.83 \times .045134321 / 4 = $1,081.43$

Column (3) Cash Income Taxes is computed by multiplying the investment income tax rate times the periodic average Cash Level from Column (4), Table VI.

Example: (\$71,778.59 + 119,903.08) / 2 = \$95,840.83 $\$95,840.83 \times .01070204 / 4 = \256.42

Column (4) Net Flow from Surplus is the periodic change in Surplus Balance posted in Column (5) of Table VI.

Example: \$335,126.78 - 410,487.66 = -\$75,360.88

Column (5) Surplus Pre-Tax Income is computed by applying the pre-tax investment yield to average periodic surplus balance computed from Column (5) of Table VI.

Example: (335,126.78 + 410,487.66) / 2 = \$372,807.22 $$372,807.22 \times .045134321 / 4 = $4,206.60$

Column (6) Surplus Income Taxes is the product of the investment income tax rate and the average periodic surplus balance computed from Column (5) of Table VI.

Example: (335,126.78 + 410,487.66) / 2 = \$372,807.22 $$372,807.22 \times .01070204 / 4 = 997.45

Column (7) Net Cash Flow is the sum of Columns (1) through (6) and represents the net flows to investors which result in a rate of return of 8.71 percent to investors in the insurance company as required by the Internal Rate of Return Model.

Example: \$27,997.72 + 1,081.43 - 256.42 - 75,360.88 + 4,206.60 - 997.45 = -\$43,329.01

DELAWARE PRE & POST TAX RETURNS PAGE 1

Column (1) Invested Assets

Categories taken from Best's Aggregates and Averages with values as of December 31, 2015.

Column (2) 12/31/15 Market Values

Treasuries, Exempt Bonds, Bonds for Unaffiliated and Affiliated Companies, Preferred Stock for Unaffiliated and Affiliated Companies and Common Stock for Unaffiliated and Affiliated Companies all taken from 2016 Best's Aggregates and Averages, Industry Total Schedule D.

Column (3) Pre-Tax Return

Treasuries based on yields by Maturity published in Federal Reserve Statistical Release H. 15 (July 7, 2017), weighted by loss payout pattern provided by the DCRB for Delaware workers compensation insurance.

Exempt Bonds based on yields by Maturity published in Bond Buyer, Municipal Market Statistics (July 6, 2017).

Bonds based on yields published by the Federal Reserve Bank of St. Louis (July 7, 2017).

Preferred stock yields based on Dividend Yield Hunter (July 10, 2017).

Common Stock Yield based on three-month Treasury Bill rate (Federal Reserve) plus Ibbotson Differential (2017 Ibbotson SBBI).

Mortgages based on yields published by the Federal Reserve Bank of St. Louis (July 7, 2017).

Real Estate Yield based on three-month Treasury Bill rate (Federal Reserve) plus Ibbotson Differential (Ibbotson & Seigel, AREUA Journal, Vol 12, No. 3, 1984).

Cash & Short Term Investment yield based on short-term treasury yield as published in Federal Reserve Statistical Release H. 15 (July 7, 2017).

Column (4) Investment Gain

Product of 12/31/15 Market Value times Pre-Tax Return expressed as a decimal value by asset type.

DELAWARE PRE & POST TAX RETURNS PAGE 2

Column (5) Tax Rate

(Percent Taxable x .35) + ((1.0 - Percent Taxable) x .15 x .35)

Percent Taxable Treasuries, Unaffiliated Bonds, Mortgages & Real Estate and Cash & Short Term Investments all assumed to be 100 percent taxable.

Exempt Bonds, Bonds in Affiliated Companies and Preferred Stock in Affiliated Companies all assumed to be tax-free.

Preferred Stock in Unaffiliated Companies: 30 percent of dividend income taxable per Tax Reform Act of 1986; all income attributed to dividends for preferred stock.

Common Stock of Affiliated Companies: 100 percent of capital gains in affiliated companies subject to income tax per Tax Reform Act of 1986. Portion of common stock income attributed to capital gains is 0.6581.

Common Stock of Unaffiliated Companies: Capital gains are taxed at the full rate, 30 percent of dividends are taxed at the full rate, and 15 percent of the remaining dividends (70 percent) are subject to tax. $(0.6581 \times 0.35) + (0.30 \times 0.35 \times 0.3419) + (0.70 \times 0.3419 \times 0.15 \times 0.35) = 0.2788$. Portions of common stock income attributable to dividend and capital gains from Duff & Phelps' 2017 SBBI Ibbotson (Large Company Stocks, Arithmetic Mean).

Column (6) Post Tax Return

Pre-Tax Return x (1.0 - Tax Rate)

R = Ratio to Average Wage

A = Percentage of workers receiving not more than the percentage of the average wage indicated by Column R

^{*}Based on data from the Delaware Department of Labor from 2011 through 2016.

DELAWARE COMPENSATION RATING BUREAU, INC.

Expense Loading

This exhibit presents expense components and the resulting permissible loss and loss adjustment expense ratio. Underwriting profit is computed through an internal rate of return model.

EXPENSE LOADING

| | Current % | Proposed % |
|----------------------------------|-----------|------------|
| LOSS AND LOSS ADJUSTMENT EXPENSE | | |
| Losses | 56.50 | 58.38 |
| Loss Adjustment Expense | 11.59 | 12.18 a |
| Loss & Loss Adjustment | 68.09 | 70.56 |
| UNDERWRITING EXPENSES | | |
| Commission | 5.56 | 5.38 |
| Other Acquisition | 2.56 | 2.39 |
| General Expenses | 3.63 | 3.26 |
| Premium Discount | 8.62 | 8.38 |
| State Premium Tax | 2.00 | 2.00 |
| Other State Tax | 0.32 | 0.33 |
| Uncollectible Premium | 1.32 | 1.10 |
| Administrative Assessment | 1.90 | 2.52 b |
| Workers Compensation Fund | 2.00 | 3.00 |
| Deviations | 0.00 | 0.00 |
| Policyholder Dividends | 0.00 | 0.00 |
| Underwriting Profit | 4.00 | 1.08 |
| Underwriting Expense Total | 31.91 | 29.44 |

a - As ratio to loss, Loss Adjustment Expense = 0.2087

RESIDUAL MARKET MINIMUM PREMIUM:

It is proposed that the Minimum Premium formula remain at

(265 * Rate) + Expense Constant

It is proposed that the Minimum Premium be subject to a Maximum Minimum Premium of \$2000. It is proposed to use a multiplier of 132.50 in the Minimum Premium formula for the Farm Classes, (0006, 0016, 0034, 0036, 0083).

RESIDUAL MARKET EXPENSE CONSTANT:

It is proposed that the expense constant remain at \$295.

b - As ratio to loss, Administrative Assessment = 0.0431

DELAWARE COMPENSATION RATING BUREAU, INC.

Indicated Residual Market Rate Change

Page 1 presents the overall indicated changes in rates and loss costs.

Derivation of the indemnity and medical trend factors and trended loss ratios shown on page 1 is presented on pages 2 and 3.

Page 4 shows the derivation of overall frequency trend factors for each of the latest four policy years.

Staff is taking into account the impact of direct savings attributable to House Bill 373.

DELAWARE COMPENSATION RATING BUREAU, INC.

Experience Rating Plan

Attached are reports monitoring the operation of the Experience Rating Plan for Manual Years 2010 through 2014. The reports compare actual (standard premium basis) and manual (manual premium basis) loss ratios by Manual Year and by size of risk within each industry group.

DELAWARE COMPENSATION RATING BUREAU, INC. DELAWARE CONSTRUCTION CLASSIFICATION PREMIUM ADJUSTMENT PROGRAM (DCCPAP)

The DCCPAP is used in Delaware as a means of addressing construction employers' concerns regarding the effects of wage differentials on workers compensation premiums. The program establishes a set of tabular premium credits given to employers engaged in the construction trades and who have paid wages in excess of minimum qualifying levels.

The DCCPAP is intended to be a means of redistributing a portion of workers compensation insurance premiums between lower-wage and higher-wage employers. The procedure, as described herein, is consistent with that used to develop the factors which are a part of the current loss costs.

The DCRB has assembled 2014 Policy Year experience data which provides historical measures of the extent to which employers in each eligible classification have qualified for DCCPAP credits, and the magnitude of credits granted under this program. The attached exhibit presents the staff analysis of this experience, and derives a proposed set of DCCPAP loadings to maintain the intended balance within the affected classifications. A brief description of page 14.1 of the attached exhibit follows:

- Column (1) Class: The numeric designation of each classification eligible for DCCPAP credit.
- Column (2) # of Policies (Total): The number of policies reported in each class, whether or not those policies applied for or received DCCPAP credit.
- Column (3) # of Policies (DCCPAP): The number of policies qualified for DCCPAP credit for the 2014 policy term.
- Column (4) Payroll (Total): The payroll attributable to the policies reported in column (2).
- Column (5) Payroll (DCCPAP): The payroll attributable to policies reported in column (3).
- Column (6) DCCPAP Policy Premium, Pre-DCCPAP: The Standard Premium which would have applied to qualifying DCCPAP policies ABSENT the tabular DCCPAP credit for those policies. The current DCCPAP load on Manual Rates is omitted from this calculation.
- Column (7) DCCPAP Policy Premium, Post-DCCPAP: The Standard Premium attributable to qualifying DCCPAP policies, reflecting the tabular DCCPAP. The current DCCPAP load on Manual Rates is omitted from this calculation.

DELAWARE CONSTRUCTION CLASSIFICATION PREMIUM ADJUSTMENT PROGRAM (DCCPAP) (continued)

- Columns (8) and (9) Non-DCCPAP Policy Premium: The Standard Premium attributable to policies which did not qualify for DCCPAP credit in 2014. The current DCCPAP load on Manual Rates is omitted from this calculation.
- Column (10) Indicated Surcharge: The ratio of Pre-DCCPAP premiums for both qualifying and non-qualifying policies to Post-DCCPAP premiums for those same policies. This is computed as (Column (6) + Column (8)) / (Column (7) + Column (9)).
- Column (11) Average DCCPAP Credit: For qualifying policies, the average credit given in 2014. For example, an average credit of 0.1883 indicates that the average qualifying risk in Code 601 received an 18.69 percent reduction in standard premium by operation of the DCCPAP plan's tabular credit. This is computed as (1.00 (Column (7) / Column (6))).
- Column (12) Class "Z": This is the credibility assigned each classification's indicated DCCPAP surcharge. The credibility formula is a linear function of total classification policies, with 140 policies or more receiving full credibility. Staff perceives the use of total policies to be more appropriate where large portions of a class have not historically qualified for DCCPAP credit.
- Column (13) Formula Surcharge: The credibility-weighted classification loadings for DCCPAP credits. The calculation uses the following values:
- Column (10) x Column (12) + (1.00 Column (12)) x Average Column (10)
- Bottom of Column (13) Test Correction Factor (TCF): The test correction factor necessary to balance credibility-weighted surcharges across all classifications to the overall indicated surcharge of 6.41 percent. The calculation for the TCF is
- (Total Indicated Surcharge) / ((Total Weighted Formula Surcharge)/(Total Premium Post-DCCPAP))
- Column (14) Final Surcharge: The product of the TCF and the formula surcharges (Column (13)) by classification.
- Page 14.2 shows a comparison of the current to the proposed surcharges by classification.
- Page 14.3 presents the derivation of the minimum eligibility wage for 6/1/18 based on changes in the statewide average weekly wage (SAWW). Those changes are expressed relative to the January 1, 1998 Table. Note that the calculations assume an <u>effective date of June 1, 2018</u> for the proposed table. Please note that the proposed (effective 6/1/18) minimum eligibility wage has decreased from \$19.75 to \$19.40. Staff is therefore proposing a decrease to the wage table.
- Page 14.4 shows the current and proposed Wage Tables.

100% Credibility = 150 Policies
Partial Credibility = # of Policies / 150

Note: For each Class,

Indicated Surcharge = (Total Premium Pre-DCCPAP) / (Total Premium Post-DCCPAP)

Basis of Credibility: 1 / ((# DCCPAP Policies)/(# Total Policies)) * 25 = 150 Policies for Full Credibility

Formula Surcharge = (Indicated Surcharge) * (Credibility for that Class) + (1 - Credibility) * (Average Indicated Surcharge)

Final Surcharge = Formula Surcharge * Test Correction Factor

0.99897

Test Correction Factor =

DELAWARE COMPENSATION RATING BUREAU, INC. RATE AND LOSS COST FORMULAE

The experience used for classification relativities for the December 1, 2017 revision will include all available risks. It is proposed that catastrophes be limited in accordance with the procedure previously employed in other DCRB filings. The experience period will be five (5) years for all classifications regardless of whether a classification might meet the full credibility requirements with less than five years of data. Credibility will be based on reported payrolls for classifications using payroll as the exposure base. For non-payroll classifications, expected losses will be used as the basis for credibility. Thus, two credibility tables will be prepared for use in the December 1, 2017 filing. The values for these respective tables will be established such that the credibility assigned to a payroll-based classification having the same portion of total statewide expected losses and payrolls attributable to its experience using each table would be equal. All occupational disease losses will be included in the exhibit of classification experience, with the total amount of such losses by type of injury being shown on a separate line on the classification rate worksheets.

The larger classifications are subject to standard procedures as described below. However, circumstances will sometimes require that some classifications' rating procedure be modified to recognize situations where the normal rating process would not be appropriate. Such classifications, and the manner in which their rates or loss costs have been derived, are separately identified within the filing material.

The calculation of assigned risk classification rates will be made in accordance with the following procedure:

- (1) Determine the pure premiums underlying present Manual Residual Market Rates by category (serious, non-serious, medical only and total) for each classification.
- (2) Adjust the present pure premiums by category (serious, non-serious, medical only and total) to the December 1, 2017 on-rate-level to obtain present on-rate-level pure premiums.
- (3) Determine Expected Losses (serious, non-serious, medical only and total) for each classification by multiplying the exposures from the experience period by the pure premiums underlying present Manual Rates.
- (4) Determine the indicated pure premiums (serious, non-serious, medical only and total) from the exposures and losses from the experience period.
- (5) Test the indicated total pure premiums by multiplying the exposures of the latest three years for each classification and obtaining the total Actual Losses for all classifications combined.
- (6) Calculate Expected Losses by multiplying the present pure premiums by the exposures from the last three years for each classification and by the overall average rate change.
- (7) Obtain correction factors by category of loss (serious, non-serious and medical only) by dividing the Expected Losses derived in (6) by the Actual Losses derived in (5).
- (8) Multiply the indicated (pre-test) pure premiums from (4) times the correction factors derived in (7) to obtain indicated (post-test) pure premiums.

RATE AND LOSS COST FORMULAE (continued)

- (9) Determine "formula" pure premiums from (2) and (8) above for each type of loss (serious, non-serious and medical only), with credibility for each category of loss corresponding to either the amount of reported payroll (for all classifications in which payroll is the exposure base) or to the amount of Expected Losses (for all "non-payroll" classifications). Credibility weights will be taken from exhibits appearing in the Class Book. The complement of credibility is in each case to be assigned to the present on December 1, 2017 level pure premiums for each category of loss.
- (10) Select proposed total pure premiums for each classification, using the middle value from the total pure premiums derived in (2), (8) and (9) above. If the proposed pure premium selected on this basis is different from the formula pure premium derived in (9) above, partial pure premiums are to be allocated between categories (serious, non-serious and medical only) in the same proportion as the partial pure premiums comprising the formula pure premium.
- (11) Test the proposed total pure premiums selected in (10) by multiplying by the exposures of the three latest years for each classification and obtaining the total Expected Losses for all classifications combined.
- (12) Obtain a correction factor by dividing the Expected Losses derived in (6) above by the Expected Losses derived in (11) above.
- (13) Calculate the "composite pure premium multipliers" for each industry group as the product of the following items:
 - (a) The pure premium correction factor determined in (12) above.
 - (b) The proposed experience rating plan off-balance factor (Collectible Premium Ratio).
 - (c) The inverse of the permissible loss and loss adjustment ratio.
 - (d) The estimated effect of the July 1, 2018 benefit change.
- (14) Apply the composite pure premium multiplier obtained in (13) above to the proposed total pure premiums to obtain Manual Rates.
- (15) Test to assure that the maximum departure of the Manual Rates derived in (14) above from current Manual Rates is in accordance with the following parameters:

Maximum Change in Rates:

Upward: The industry group average change plus 25% rounded to the nearest 1%.

Downward: The industry group average change minus 25% rounded to the nearest 1%.

- (16) Manual rates are to be rounded to the nearest \$.01.
- (17) Test the Manual Rates derived in (16) above to determine if balance has been achieved within 0.0005 of the indicated change in rate level by industry group. If such balance has not been achieved, calculate the necessary correction factor to adjust the composite pure premium multipliers derived in (13) above to achieve the necessary balance. Perform steps (14) through (17) iteratively until the desired balance is achieved.

RATE AND LOSS COST FORMULAE (continued)

Non-reviewed Classifications

(18) For classifications with insufficient credibility (non-reviewed classifications), an alternative calculation is used to derive indicated rates.

Insufficient credibility is defined as having five-year payroll less than that necessary to achieve 5% credibility for the non-serious component of pure premium. For non-payroll based classifications, expected losses replace payrolls.

For these non-reviewed classes, the indicated rate is calculated as follows:

- a) An average loss cost using Pennsylvania loss cost values and the Delaware distribution of business by class is calculated.
- b) Classification relativities are then calculated that relate the Pennsylvania loss cost by classification to the average overall loss cost calculated in (a) above.
- c) Indicated average loss costs are calculated by class by multiplying the relativities in (b) above times the average Delaware loss cost value for all classes combined times the average manual change in rates times the indicated composite pure premium multiplier.
- d) A second indicated rate is calculated by applying the average manual change in rates by industry group to the current Delaware rate for the class.
- e) A final indicated rate, subject to capping and balancing criteria previously described, is calculated by applying one-third weight to (c) above plus two-thirds weight to (d) above.

Loss Costs

The calculation of non-assigned risk classification loss costs will be made in accordance with the following procedure:

(19) Multiply the proposed assigned risk Manual Rates by classification by the permissible loss, loss adjustment expense and loss based assessment ratio.

DELAWARE COMPENSATION RATING BUREAU, INC.

Small Deductible Program

The attached exhibits review the impact of deductibles on loss costs and residual market manual rates. Staff has proposed nominal changes to the loss elimination ratios and premium credit factors currently in effect.

DELAWARE COMPENSATION RATING BUREAU, INC.

Empirical Delaware Loss Distribution

Pages 1 through 4 of the attached exhibit present a distribution of Delaware losses by size of claim. The losses used to produce this distribution include three years of experience. Losses have been trended to the midpoint of the experience period for the proposed loss costs and adjusted to reflect current benefit levels. Additionally, losses were brought to an ultimate level by applying development factors to open claims.

Page 5 of the exhibit shows a summary and includes loss ranges consistent with those published with the excess loss factors. In certain instances it was necessary to interpolate between loss size ranges in the empirical distribution in deriving excess loss factors for specified limits.

Pages 6 through 9 of this exhibit show excess loss ratios by loss limitation separately for death, permanent total, permanent partial and temporary total claims. The columns labeled "Actual" represent excess losses based entirely on actual losses. For each type of injury, losses of \$250,000 and higher were fitted to a loss distribution curve and actual losses and claim counts were replaced by the fitted values. Cumulative losses and claim counts were then recalculated using fitted values above \$250,000 and actual values for loss limitations below \$250,000. The resulting excess loss ratios are shown in the column labeled "Fitted". Lognormal distributions were selected for use in fitting the data for each type of injury.

Page 10 is a graph showing the cumulative loss distribution for the above mentioned types of injury, along with the total for all injuries. The y-axis represents the cumulative percentage of total incurred losses.

DELAWARE COMPENSATION RATING BUREAU, INC.

Excess Loss (Pure Premium) Factors

Proposed excess loss (pure premium) factors are shown on the last page of the attachment together with the current factors and the percentage change.

The excess loss analysis relies almost entirely on actual Delaware size of loss data.

Because of the relatively small number of large claims (claims over \$1,000,000) in Delaware, excess ratios over \$1,000,000 have been established based on Pennsylvania relativities at higher loss limits. Those Pennsylvania relativities are applied to Delaware excess factors at \$1,000,000. For example, if the Pennsylvania excess loss ratio at \$5,000,000 is one-half the Pennsylvania excess loss ratio at \$1,000,000 then the Delaware excess loss ratio at \$5,000,000 will be equal to the Delaware excess loss ratio at \$1,000,000 multiplied by one-half. This approach is analogous to procedures used in prior Pennsylvania filings where excess loss factors at higher limits were based on Pennsylvania excess indications at a designated level and National Council on Compensation Insurance, Inc. excess loss factor relativities above that selected threshold.

Page 1, Exhibit I shows average claim costs by hazard group within each type of injury as well as overall average costs for all hazard groups combined. Total incurred loss weights by type of injury and hazard group are shown in Exhibit II. Factors representing Pennsylvania relativities at loss limits above \$1,000,000 are shown in Exhibit III.

Page 2 derives excess loss ratios by loss limitation for Hazard Group A using type of injury loss distributions from Exhibit 17a. The excess ratios by type of injury are weighted together and the resulting average pure excess loss ratios are shown in the last column on the page.

Pages 3 through 8 use the same approach to calculate excess ratios for Hazard Groups B through G, respectively.

Page 9 columns (1) through (7) display the overall average excess ratios from pages 2 through 8. In addition, ratios above \$1,000,000 are calculated using the relativities from Exhibit III page 1. Since published loss costs in Delaware include a provision for loss based assessments, it is necessary to apply an adjustment factor to express the excess ratios as a function of loss costs. This is shown in Columns (8) - (14) of page 9.

A risk load of 0.005, subject to a maximum equal to one-half each excess loss factor, was added. The resulting factors are shown in columns (15) - (21) of page 9.

The proposed excess loss factors shown on page 10 may differ slightly from these indicated on page 9. Excess loss factors will generally reflect incremental costs per unit of exposure which decrease as loss limitation levels increase. To maintain this pattern, minor modifications to the indicated values on page 9 may have been made and the resulting factors are shown on page 10.

Page 10 compares the proposed 2017 excess loss factors with the current 2016 excess loss factors.

DELAWARE COMPENSATION RATING BUREAU, INC

Excess Loss Pure Premium Factors Adjusted to Include Allocated Loss Adjustment Expenses

Average excess loss pure premium ratios by hazard group and loss limitation are derived in Exhibit 17b. Those same excess ratios are presented herein and adjusted to include a provision for allocated loss adjustment expenses.

Pages 1 and 2 show the calculation of excess ratios for hazard groups A through G.

These factors are applicable to voluntary market loss costs.

^{*} Adjusted

Excess Loss Premium Factors

Average excess loss pure premium ratios by hazard group and loss limitation are derived in Exhibit 17b. Those same excess ratios are presented herein and adjusted to express excess losses as a portion of residual market rates.

Pages 1 and 2 show the calculation of excess ratios for hazard groups A through G.

| Loss | | | | | | | ELF adjusted for LBA's TCR 0.5838 | | | | | | ELF adjusted for LBA's & Risk Load | | | | | | | | |

^{*} Adjusted

Excess Loss Premium Factors Adjusted to Include Allocated Loss Adjustment Expenses

Average excess loss pure premium ratios by hazard group and loss limitation are derived in Exhibit 17b. Those same excess ratios are presented herein and adjusted to include allocated loss adjustment expenses and to express the resulting loss and ALAE as a portion of residual market rates.

Pages 1 and 2 show the calculation of excess ratios for hazard groups A through G.

^{*} Adjusted

State and Hazard Group Relativities

The attached exhibit pages present an analysis of Delaware State and Hazard Group relativities.

The exhibit shows the derivation of the December 1, 2017 proposed relativities. DCRB and NCCI average costs are shown by hazard group and in total. A credibility weight is calculated for each hazard group based on the number of claims. A credibility weighted average cost is then calculated and these average costs are related to the NCCI overall average cost to generate the indicated (and selected) relativities. An adjustment has been made to recognize the impact of Senate Bill 1, Senate Bill 238, House Bill 175 and House Bill 373 on Delaware average costs.

The bottom of the exhibit presents the approved December 1, 2016 relativities.

Derivation of State Hazard Group Relativities Delaware December 1, 2017 Filing

Delaware Insurance Plan

The following pages present a review of the experience for the Delaware Insurance Plan.

Page 19.1 compares the reported loss ratio for a five-year period of the assigned risk and voluntary markets by the premium size range. The second page shows similar detail but by year rather than premium size.

The bottom portion of page 19.2 also shows the calculation of a manual rate offset for a residual market surcharge program applicable to rated Residual Market risks with debit experience modification factors. It is contemplated that these risks would be subject to a surcharge ranging from 0 to +50%, with a maximum set at the value of the modification factor less unity, and that the surcharge would be calculated by multiplying 50% times the complement of the risk's experience rating credibility. The offset is applicable to voluntary market risks.

The residual market share calculation is given on page 19.3.

Page 19.4 contains the calculation of the average surcharge based on the above methodology.

The assigned risk subsidy is derived as shown on page 19.5.

| 5 Total - All Assigned Risks | | 24,112,647 | 0.092 | 100.00% |

Surcharge = 50% * (1 - cred), not exceeding the modification factor less unity and applies to risks with debit modification factors.

DELAWARE INSURANCE PLAN ASSIGNED RISK SUBSIDY

Calculation of residual market subsidy multiplier to be added to Retro Rating Plan tax multiplier.

| 1 | ARMS | Delaware Insurance Plan Market Share | 0.0738 |
|---|------|--------------------------------------|--------|
| 2 | VMS | Voluntary Market Share (1 - ARMS) | 0.9262 |
| 3 | LRD | Loss Ratio Differential | 1.72 |
| 4 | PLR | Permissible Loss Ratio | 0.5838 |
| 5 | ARLR | Assigned Risk Loss Ratio | |
| 6 | VLR | Voluntary Loss Ratio | |
| 7 | S | Subsidy | |

VLR = 0.5544

$$ARLR = 1.72 * VLR = 0.9536$$

DIFF = ARLR - VLR = 0.3992

$$S = (0.8) * (ARLR - VLR) * (ARMS / VMS)$$

$$= (0.8) * (39.92\%) * (0.0738 / 0.9262)$$

$$= (0.8) * (39.92\%) * (0.0797)$$

= 2.55%

Review of Experience Rating Plan Parameters

Page 20.1 contains Collectible Premium Ratios.

Page 20.2 contains Expected Loss Cost Factors. They are applied to residual market rates by classification to produce Table A, Expected Loss Factors, which are the basis for the calculation of Expected Losses.

Page 20.3 contains the derivation of various factors, i.e. maximum single loss size, self-rating point, that are used to produce Table B.

Table II - Unit Statistical Data

Pages 1 through 4 contain indemnity and medical unit statistical data, in total and by industry group. The data includes loss adjustment expense and is on-level, trended and developed to ultimate. All medical losses, regardless of type of claim, are shown in the "medical" column.

Pages 5 through 8 contain the medical unit statistical data, on the same basis as pages 1 through 4, but separated by type of claim.

Table III - Unit Statistical Data

Pages 1 through 4 contain indemnity and medical unit statistical data, in total and by industry group. The data includes loss adjustment expense and is developed to ultimate. All medical losses, regardless of type of claim, are shown in the "medical" column.

Pages 5 through 8 contain the medical unit statistical data on the same basis as Pages 1 through 4, but separated by type of claim.

<u>Table IV - Unit Statistical Data</u>

Pages 1 through 4 contain payroll, premium and loss unit statistical data for the latest five manual years for which data is available, in total and by industry group. Pure premiums, incurred losses and claim counts by type of injury are shown.

All data is shown on a reported basis.

Claim Frequencies

The attached exhibits examine historical Workers Compensation claim frequencies in Delaware.

Claim frequencies per \$1 million of expected losses are shown on page 1 based on statistics gathered by the DCRB. The second page shows a graph of the frequencies appearing in column (5) of page 1.

The third page shows annual changes in average quarterly wages over the last eight available calendar quarters.

<u>Delaware W.C. - Claim Frequencies</u> DCRB Unit Statistical Plan

^{*} Delaware Department of Labor

Retrospective Development Factors

EXHIBIT XII

DELAWARE RETROSPECTIVE DEVELOPMENT FACTORS *

Retrospective development factors for first, second and third adjustments are calculated below. They are intended for use in retrospective plans with no loss limitation and applicable to the expected loss portion of premium.

| First Adjustment | RDF = | 0.5936 |
|-------------------|-------|--------|
| Second Adjustment | RDF = | 0.4595 |
| Third Adjustment | RDF = | 0.3797 |

For those companies using retrospective development factors with loss limitations, the following formula may be used.

$$RDF(LIM) = (1.0 - ELF) \times RDF$$

RDF(LIM) = Retrospective Development Factors at limited basis ELF = Excess Loss (Pure Premium) Factors exclusive of allocated loss adjustment expenses for given Hazard Group and Loss Limitation RDF = Retrospective Development Factors without Loss Limitation

For Example:

First Adjustment RDF =
$$(1 - 0.651) * 0.5936 = 0.2072$$

^{*} The use of retrospective development factors is optional.

Tax Multiplier

EXHIBIT XI

CALCULATION OF TAX MULTIPLIER FOR USE IN RETROSPECTIVE RATING PLANS (O/T U.S.L. & H.W. Act Coverages)

Expense Provisions for O/T U.S.L. & H.W. Classes

| Losses | 58.38 |
|----------------------------|-------|
| Loss Adjustment Expense | 12.18 |
| Loss & Loss Adjustment | 70.56 |
| | |
| Premium Discount | 8.38 |
| Acquisition | 7.77 |
| General Expenses | 3.26 |
| Profit and Contingencies | 1.08 |
| Taxes | 2.33 |
| Uncollectible Premium | 1.10 |
| Workers' Compensation Fund | 3.00 |
| Administrative Assessment | 2.52 |
| | 29.44 |

lf

T = Tax multiplier

E = Expense provision in rates (General, Acquisition, and Profit), less premium discount

L = Loss provision in rates

C = Loss conversion factor

B = Assessments made on premiums

A = Assessments made on losses (adjusted so as not to collect profit and general expense dollars on the extra premium generated by the assessments)

Using average discount (Schedule Y) this yields:

$$ACQ \qquad GEN \qquad PROFIT \qquad PREM DISC$$

$$E = 0.0373 = 0.0777 + 0.0326 + 0.0108 - 0.0838$$

$$A = 0.0418 = 0.0431 \times \frac{1 - 0.0373 - 0.0643}{1 - 0.0099 - 0.0643}$$

<u>Then</u>

$$T = \underbrace{\begin{array}{ccc} 0.0373 + 0.5838 & (1 + 0.2087 + 0.0418) \\ 0.0373 + 0.5838 & (1 + 0.2087) \end{array}}_{} x \underbrace{\begin{array}{ccc} 1 \\ 1 - 0.0643 - 0.0255 \end{array}}_{} = \underbrace{\begin{array}{ccc} 1.1347 \\ 1 - 0.0643 - 0.0255 \end{array}}_{}$$

Note: As described in Exhibit 15, for low credibility classifications, an alternative approach may be employed to derive classification rating values. In those instances the final indicated rating value will generally be different than that shown in the Class Book.

December 1, 2017 Residual Market Rate and Voluntary Market Loss Cost Filing

Calculation of Composite Pure Premium Multipliers

| Item | Manufacturing and Utilities | Contracting and Quarrying | Other Industries |
|-----------------------------------------------------------|-----------------------------------|---------------------------------|---------------------|
| (1) Pure Premium Test Correction Factor | 0.9857 | 1.0023 | 1.0145 |
| (2) Off-Balance Factor (Collectible Prem Ratio) | 1.0910 | 1.0442 | 0.9299 |
| (3) Expense Provision (= 1 / 0.7056) | 1.4172 | 1.4172 | 1.4172 |
| (4) Effect of 7/1/18 Benefit Change | 0.9948 | 0.9948 | 0.9948 |
| (5) Rate Test Correction Factor | 1.0341 | 0.9889 | 0.9683 |
| (6) Composite Pure Premium Multiplier (1)*(2)*(3)*(4)*(5) | 1.5678 | 1.4591 | 1.2879 |

CALCULATION OF PER CLAIM AND CATASTROPHE LIMITATIONS

All Death, Permanent Total and Major Disability claims in the Delaware experience for Manual Years 2010 through 2014 were translated using composite multipliers, yielding an average claim value of \$ 1,109,530 . Using twice this value as unity and using the indicated Hazard Group Relativities produced the following results:

| Hazard Group | Hazard Group Relativities * | Per Claim Limit (2) * \$1,109,530 | Per Accident Limit (3) * 2 |
|-----------------|--------------------------------|--------------------------------------|-------------------------------|
| (1) | (2) | (3) | (4) |
| А | 0.70 | 776,671 | 1,553,342 |
| В | 0.79 | 876,529 | 1,753,058 |
| С | 0.90 | 998,577 | 1,997,154 |
| D | 1.02 | 1,131,721 | 2,263,442 |
| Е | 1.15 | 1,275,960 | 2,551,920 |
| F | 1.30 | 1,442,389 | 2,884,778 |
| G | 1.47 | 1,631,009 | 3,262,018 |

[@] From Delaware 12/1/17 excess loss analysis materials

CREDIBILITY

The classification relativity criteria for 100 percent credibility for the various categories of loss are as follows:

Serious: 175 * Average Cost of Serious Case (including Medical)

Non-Serious: 500 * Average Cost of Non-Serious Case (including Medical)

Medical: 10 Percent of the Non-Serious

The following calculations are based on the figures in Table V, Section B.

| | | | | | AVERAGE |
|-------------------|--------|-------------|-------------|-------------|-----------|
| | No. | INDEMNITY | MEDICAL | TOTAL | COST |
| _ | Cases | AMOUNT | AMOUNT | AMOUNT | (4) / (1) |
| | (1) | (2) | (3) | (4) | (5) |
| Death | 25 | 9,791,500 | 25,987,900 | 35,779,400 | 1,431,176 |
| Permanent Total | 12 | 19,750,500 | 41,809,500 | 61,560,000 | 5,130,000 |
| Major | 1,054 | 298,779,800 | 475,148,900 | 773,928,700 | 734,278 |
| Total Serious | 1,091 | 328,321,800 | 542,946,300 | 871,268,100 | 798,596 |
| Minor | 3,283 | 134,947,000 | 233,664,800 | 368,611,800 | 112,279 |
| Temporary | 6,778 | 100,766,900 | 174,453,000 | 275,219,900 | 40,605 |
| Total Non-Serious | 10,061 | 235,713,900 | 408,117,800 | 643,831,700 | 63,993 |

Accordingly, the criteria for 100 percent credibility will be:

| _ | Indicated Average Cost | Selected Average Cost | Criteria for 100% Credibility | _ |
|-------------|------------------------------|-----------------------------|-------------------------------------|-----|
| Serious | 798,596 | 1,109,530 | 194,167,750 | * |
| Non-Serious | 63,993 | 65,713 | 32,856,500 | ** |
| Medical | N/A | N/A | 3,285,650 | *** |

^{*} Serious Credibility = 175 x Selected Serious average cost

^{**} Non-Serious = 500 x Selected Non-Serious average cost

^{***} Medical = 10% of Non-Serious credibility criteria
