DELAWARE COMPENSATION RATING BUREAU, INC.

Delaware Workplace Safety Program and Merit Rating Plan

All experience rated risks are eligible to participate in the Workplace Safety Program. The credit is equal to 20% of the complement of their experience rating plan credibility. Page 29.1 shows Workplace Safety Program data for eligible and participating risks under the program.

Also, a Merit Rating Plan is available for risks not eligible for Experience Rating. In order to qualify for a Merit Rating discount, a risk must have no indemnity claims during the last three completed policy periods. The program is revenue neutral with one indemnity claim and the risk receives a surcharge for two or more indemnity claims.

Page 29.2 shows the surcharge to manual residual market rates and voluntary market loss costs for the Merit Rating Plan and Workplace Safety Program.

Summary of Indicated and Proposed Residual Market Rates by Class Code

Exhibits 31a and 31b present current, indicated and proposed rates along with the proposed percentage change, all on a pre-surcharge basis. Also shown is the proposed post-surcharge rate.

Exhibit 31a presents this information sorted by class code.

DELAWARE COMPENSATION RATING BUREAU, INC.

Evaluation of House Bill 373 of 2014

Introduction

§2322B of House Bill 373 of 2014 (HB373) set forth procedures and requirements applicable to the health care payment system for workers compensation claims, and particularly impacting the fee schedule for all Delaware workers compensation funded procedures, treatments and services. Among those procedures and requirements are the following notable elements:

$\S 2322B(3)(a)$:

The Workers' Compensation Oversight Panel (WCOP) was required to establish a fee schedule(s) based on the Resource Based Relative Value Scale ("RBRVS"), Medical Severity Diagnosis Related Group (MS-DRG), Ambulatory Payment Classification (APC), or equivalent scale used by the Centers for Medicare and Medicaid Services.

The fee schedule(s) are required to result in a reduction of 20% in aggregate workers compensation medical expenses by the year beginning January 31, 2015, an additional reduction of 5% of 2014 expenses by the year beginning January 31, 2016 and an additional reduction of 8% of 2014 expenses by the year beginning January 31, 2017.

$\S 2322B(3)(b)$:

By January 31, 2017, no individual procedure in Delaware paid for through the workers compensation system shall be reimbursed at a rate greater than 200% of that reimbursed by the federal Medicare system, provided that radiology services may be reimbursed at up to 250% of the federal Medicare reimbursement and surgery services may be reimbursed at up to 300% of the federal Medicare reimbursement.

Section 3:

The advisory organization designated by the Department of Insurance pursuant to Title 18, Section 2607 of the Delaware Code (DCRB) was required, within 90 days of enactment of HB373, to file for approval by the Insurance Commissioner prospective loss costs that explicitly and individually accounted for the impact of any statutory changes in HB373.

Note: HB373 was signed into law on July 15, 2014. Accordingly, 90 days after enactment of HB373 was October 13, 2014.

Consistent with the evaluations of HB373 in the DCRB's December 1, 2014 and subsequent filings, the DCRB has elected to again apply the full level of savings called for in HB373 to the development of the December 1, 2017 residual market rate and voluntary market loss cost change. When Medical Data Call information pertaining to services provided, subject to the new fee schedules, has been collected and compiled for a sufficient period of time, the DCRB would be able to credibly measure the changes in expenditures occurring after the implementation of the new fee schedules. If such a review suggests that savings mandated under the law have not been accomplished, the DCRB reserves its right to submit, at any time following the completion of that review, a filing of prospective loss costs and residual market rates consistent with the DCRB's evaluation of the effects of HB373.

Sheet 2 of Exhibit 35 calculates savings factors by payment year for a forty-year medical payout pattern attributable to the intended effects of the legislation. The expected annual savings from 2014 medical expenses are reflected in the first, second and finally third year of the payout. For the second and third years of the payout pattern, the required reductions in medical expenses pre-empt what would otherwise have been inflationary adjustments to medical fees and payments based on the CPI-U index. This overlap of provisions amplifies the otherwise attainable savings for this legislation. For 2015 and 2016, the first and second years under the mandated reductions, the actual CPI-U values (0.1%) and (1.3%), respectively, replaced the projected values from the previous analyses (2.0%). This caused a slight reduction in the savings factors over the forty-year projection.

On Sheet 1 of Exhibit 35, the savings factors from Sheet 2 are applied to the DCRB's selected medical payout pattern. The resulting cumulative payments (\$685,934) are compared to the unadjusted payout of \$1,000,000, deriving the overall HB373 potential savings factor of 31.41 percent.

^{*} Adopted by Delaware Department of Labor in January 31, 2015 Fee Schedule

DELAWARE COMPENSATION RATING BUREAU, INC.

Table I - Summary of Financial Call Data

Table I presents premium and loss data which forms the basis for calculating development factors and projecting ratios of actual losses to premiums by policy year. Losses are shown on paid and case incurred (paid plus outstanding, excluding bulk and IBNR) bases split between indemnity and medical.

The data represents a summary of accumulated policy year experience as reported by carriers in the annual Financial Calls for Experience.

Four sets of development factors are shown, measuring the development from December 31, 2012 to December 31, 2013; December 31, 2013 to December 31, 2014; December 31, 2014 to December 31, 2015; and December 31, 2015 to December 31, 2016. So as to maximize the use of available data, the companies used in each stage of development are allowed to be independent of those used in other stages of development; therefore, the figures shown for a given valuation date may vary for purposes of comparison to the prior and subsequent points.

Experience for large deductible policies has been excluded from Table I.

Table I - Pages 1-6 - Reported Data

The data on pages 1-6 represent the experience as reported by the carriers. Consequently, the 12/31/09 and later valuations of losses reflect the impact of changes legislated by Senate Bill 1 of 2007, Senate Bill 238 of 2012, House Bill 175 of 2013 and House Bill 373 of 2014.

<u>Table I - Pages 7-16 - Adjustments to reflect Senate Bill 1, Senate Bill 238 and House Bill 175</u> medical savings but prior to House Bill 373 medical savings

In order to analyze the loss development patterns suggested by the financial data, the medical payments and medical case reserves are put on a consistent basis with regard to benefit levels. Beginning with the December 1, 2009 rate and loss cost filing, all medical payments and reserves were adjusted to a pre-Senate Bill 1 benefit level to remove the effects of Senate Bill 1, Senate Bill 238, House Bill 175 and House Bill 373 from the reported data. With the advent of this filing, all medical payments and reserves are now adjusted to a post-House Bill 175, pre-House Bill 373 benefit level. That is, they reflect benefit levels after the effects of Senate Bill 1, Senate Bill 238 and House Bill 175 but before the effects of House Bill 373. Medical data has also been adjusted to reflect the anticipated improvements in medical trend due to Senate Bill 1 and Senate Bill 238. Pages 7-16 show the adjustments to bring medical losses to post-House Bill 175, pre-House Bill 373 levels for Calendar Years 2007-2016, respectively.

Consistent with the rate and loss cost filings effective December 1, 2009 and subsequent, staff's adjustments of medical payments are assumed to be effective immediately after payments are made. Adjustments of case reserve levels for the impacts of legislation will continue to be adjusted evenly over a 36-month period.

Table I - Pages 17-22 - Adjusted to Post-House Bill 175, Pre-House Bill 373 levels

Pages 17-22 reflect the adjustment to medical costs to bring all data to a post-House Bill 175, pre-House Bill 373 level. This data was the basis for all subsequent loss development and trend analysis.

DELAWARE COMPENSATION RATING BUREAU, INC.

Paid and Incurred Loss Development and Trend – Unlimited Losses

Page 1 of the attachment shows the calculation of Standard Earned Premiums. Standard Earned Premiums are developed to ultimate, adjusted to current residual market rate level and adjusted to remove the impact of expense constants, the DCCPAP program and the residual market surcharge program.

Pages 2 through 13 present indemnity losses and loss adjustment expense.

Page 2 shows incurred and paid loss development factors and ratios of incurred to paid losses, based on the current Table I. An average of the latest four factors is shown. Selected factors are generally based upon a fitting of the four-year averages to a curve.

Page 3 arranges the factors according to the loss development approach shown. There are three methods: case incurred, paid to twenty-seventh and the average of the incurred and paid to twenty-seventh methods. The last section of page 3 shows the loss on-level and loss adjustment expense factors applicable.

Page 4 shows the loss base (paid or incurred losses depending on the method) to which the development factors apply, the projected ultimate level of losses, and ultimate losses adjusted to current benefit levels and including loss adjustment expense.

The top portion of page 5 presents ultimate on-level loss and loss adjustment expense ratios by policy year for each methodology. The middle portion of page 5 presents information on claim frequencies, which are further discussed in Exhibit 23. The first column shows frequencies by policy year. The second column shows normalized values for claim frequency with Policy Year 2003 set equal to unity. Staff selected a frequency trend factor of -5.0%. This trend factor is the arithmetic average of the seven-point frequency trend factor (Policy Years 2009 through 2015) and the seven-point frequency trend factor (Policy Years 2007 through 2015 excluding Policy Years 2009 and 2010). The lower portion of page 5 shows severity ratios which are defined herein as loss ratios adjusted to a common underlying claim frequency level. The severity ratios are calculated by dividing the loss ratios in the top section of page 5 by the normalized claim frequencies in the middle portion of page 5 for each policy year and loss development approach.

Page 6 shows fitted values for severity ratios fitted to a straight line for each loss development approach and using from 4 to 10 points. The top portion of page 7 shows those same straight lines trended to the midpoint of the prospective rating period (12/1/18). The second section of

page 7 shows severity trend factors by policy year calculated by dividing the trended points on page 7 by the fitted values on page 6.

Pages 8 and 9 present the analogous exponential severity trend factor calculation. Pages 10 and 11 show the loss ratio trend factors by policy year which are a product of the severity (pages 7 and 9) and frequency (page 5) trend factors that were previously calculated.

Pages 12 and 13 show averages of the four latest policy years trended to the midpoint of the prospective rating period (12/1/18) on a linear and exponential basis, respectively.

Pages 14 through 25 show experience for medical loss and loss adjustment expense laid out the same way as pages 2 through 13 while pages 26 and 27 show a summary of annualized severity and loss ratio trend factors.

DELAWARE COMPENSATION RATING BUREAU, INC.

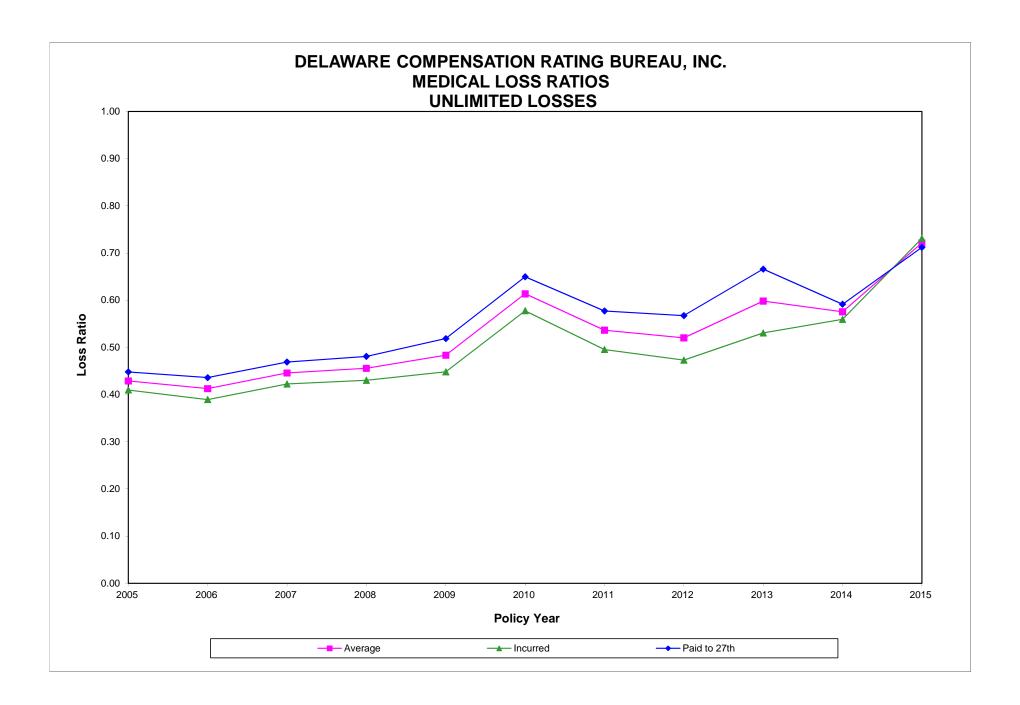

<u>Graphs of Selected Loss Development Projections – Unlimited Losses</u>

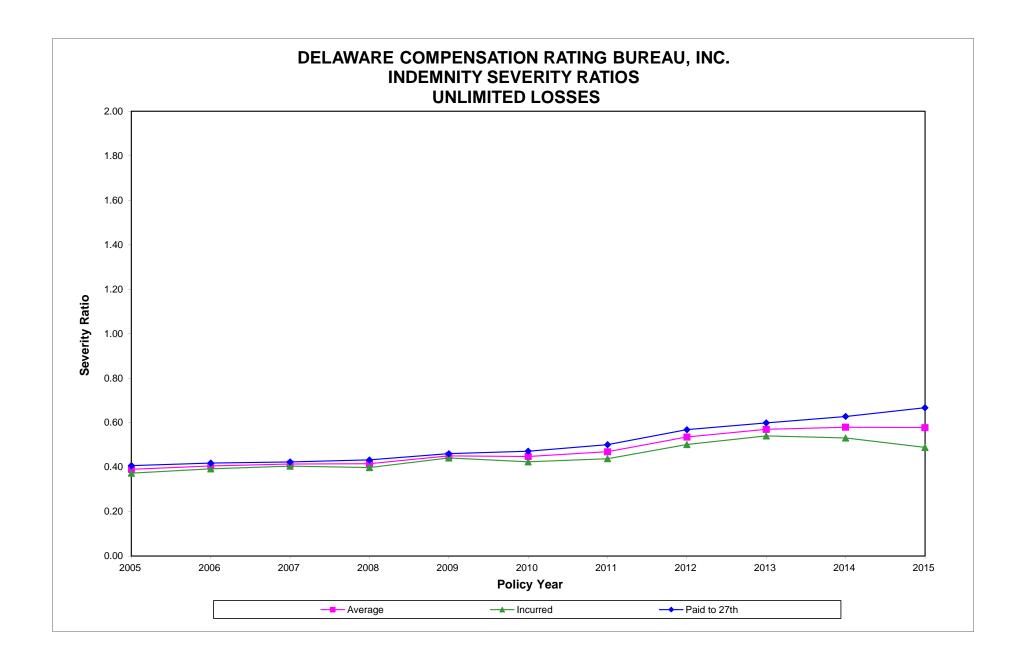

Pages 1 and 2 of this exhibit show graphs of loss and LAE ratios for indemnity and medical derived from the following selected loss development approaches:

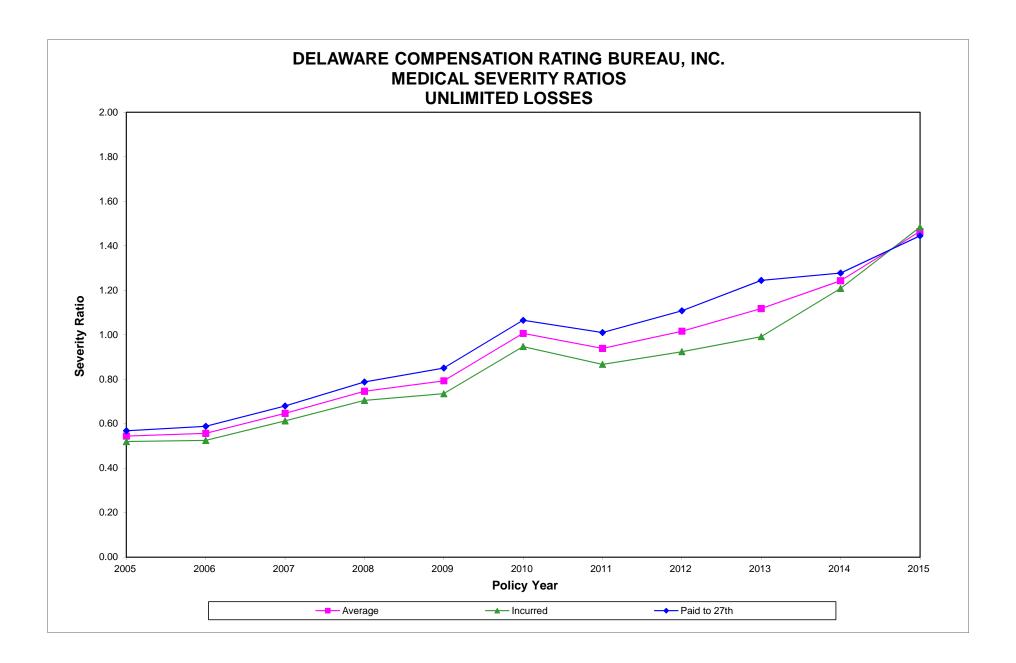

- Average of Incurred and Paid to 27th
- Incurred
- Paid to 27th

Pages 3 and 4 of this exhibit show graphs of severity ratios for indemnity and medical for the same selected loss development approaches.

Attention: Mitch Crane, Deputy Insurance Commissioner

RE: DCRB Amended Filing No. 1701

Workers Compensation Residual Market Rate and Voluntary Market Loss Cost

Filing

Proposed Effective December 1, 2017

Dear Commissioner Navarro:

Consistent with discussions held between representatives of the Department of Insurance, the Ratepayer Advocate and the Delaware Compensation Rating Bureau, Inc. (DCRB), I am submitting Amended Filing No. 1701 containing revisions to residual market rates and voluntary market loss costs on behalf of the members of the DCRB. This filing amends and supersedes our original submission in Filing No. 1701.

The rating values presented in this amended filing reflect changes by class code with overall average impacts of -5.73% for collectible residual market rates and -3.00% for collectible voluntary market loss costs. These changes, which differ from the proposed changes in the original Filing No. 1701 (overall average decreases of 4.91% in residual market rates and 2.15% in voluntary market loss costs), resulted from discussions between the Department of Insurance, the Ratepayer Advocate and the DCRB.

This amended filing presents revised exhibits that replace those submitted with the original filing. All other exhibits in original Filing No. 1701 are incorporated in Amended Filing No. 1701 by reference. In addition to this SERFF submission, the revised exhibits will be available on the DCRB's website: www.dcrb.com.

The revised exhibits are as follows:

Summary of Material for Modification of Experience - Brown Book

• Exhibit 12 Indicated Residual Market Rate Change

• Exhibit 20 Review of Experience Rating Plan Parameters

Exhibit 27 Manual Rates, Loss Costs and Expected Loss Rates

Exhibit 28 Index to Classification Exhibits

Other completed Property & Casualty Filing Forms provided in support of this filing are enclosed:

- State-Specific Requirements
- Property & Casualty Transmittal Document
- Rate/Rule Filing Schedule

The DCRB looks forward to a prompt approval of Amended Filing No. 1701 and welcomes any questions that you or your staff may have about this matter.

Sincerely,

William V. Taylor President

| Underwriting Expense Total | 31.91 | 29.44 |

a - As ratio to loss, Loss Adjustment Expense = 0.2087

RESIDUAL MARKET MINIMUM PREMIUM:

It is proposed that the Minimum Premium formula remain at

(265 * Rate) + Expense Constant

It is proposed that the Minimum Premium be subject to a Maximum Minimum Premium of \$2000. It is proposed to use a multiplier of 132.50 in the Minimum Premium formula for the Farm Classes, (0006, 0016, 0034, 0036, 0083).

RESIDUAL MARKET EXPENSE CONSTANT:

It is proposed that the expense constant remain at \$295.

b - As ratio to loss, Administrative Assessment = 0.0431

NOTE: So as to maximize the use of available data, the companies used in one stage of development were allowed to be independent of those used in the other stage of development; therefore, the figures shown at each valuation may vary.

2016

6,603,857

^{*} Losses limited on a per-claim basis, with the actual limitation varying by policy year as described in Exhibit 1a.

Losses are expressed on a post-HB175, pre-HB373 basis.

30

EXHIBIT VIII DELAWARE COMPENSATION RATING BUREAU, INC. RATE AND LOSS COST FORMULAE

The experience used for classification relativities for the December 1, 2017 revision will include all available risks. It is proposed that catastrophes be limited in accordance with the procedure previously employed in other DCRB filings. The experience period will be five (5) years for all classifications regardless of whether a classification might meet the full credibility requirements with less than five years of data. Credibility will be based on reported payrolls for classifications using payroll as the exposure base. For non-payroll classifications, expected losses will be used as the basis for credibility. Thus, two credibility tables will be prepared for use in the December 1, 2017 filing. The values for these respective tables will be established such that the credibility assigned to a payroll-based classification having the same portion of total statewide expected losses and payrolls attributable to its experience using each table would be equal. All occupational disease losses will be included in the exhibit of classification experience, with the total amount of such losses by type of injury being shown on a separate line on the classification rate worksheets.

The larger classifications are subject to standard procedures as described below. However, circumstances will sometimes require that some classifications' rating procedure be modified to recognize situations where the normal rating process would not be appropriate. Such classifications, and the manner in which their rates or loss costs have been derived, are separately identified within the filing material.

The calculation of assigned risk classification rates will be made in accordance with the following procedure:

- (1) Determine the pure premiums underlying present Manual Residual Market Rates by category (serious, non-serious, medical only and total) for each classification.
- (2) Adjust the present pure premiums by category (serious, non-serious, medical only and total) to the December 1, 2017 on-rate-level to obtain present on-rate-level pure premiums.
- (3) Determine Expected Losses (serious, non-serious, medical only and total) for each classification by multiplying the exposures from the experience period by the pure premiums underlying present Manual Rates.
- (4) Determine the indicated pure premiums (serious, non-serious, medical only and total) from the exposures and losses from the experience period.
- (5) Test the indicated total pure premiums by multiplying the exposures of the latest three years for each classification and obtaining the total Actual Losses for all classifications combined.
- (6) Calculate Expected Losses by multiplying the present pure premiums by the exposures from the last three years for each classification and by the overall average rate change.
- (7) Obtain correction factors by category of loss (serious, non-serious and medical only) by dividing the Expected Losses derived in (6) by the Actual Losses derived in (5).
- (8) Multiply the indicated (pre-test) pure premiums from (4) times the correction factors derived in (7) to obtain indicated (post-test) pure premiums.

RATE AND LOSS COST FORMULAE (continued)

- (9) Determine "formula" pure premiums from (2) and (8) above for each type of loss (serious, non-serious and medical only), with credibility for each category of loss corresponding to either the amount of reported payroll (for all classifications in which payroll is the exposure base) or to the amount of Expected Losses (for all "non-payroll" classifications). Credibility weights will be taken from exhibits appearing in the Class Book. The complement of credibility is in each case to be assigned to the present on December 1, 2017 level pure premiums for each category of loss.
- (10) Select proposed total pure premiums for each classification, using the middle value from the total pure premiums derived in (2), (8) and (9) above. If the proposed pure premium selected on this basis is different from the formula pure premium derived in (9) above, partial pure premiums are to be allocated between categories (serious, non-serious and medical only) in the same proportion as the partial pure premiums comprising the formula pure premium.
- (11) Test the proposed total pure premiums selected in (10) by multiplying by the exposures of the three latest years for each classification and obtaining the total Expected Losses for all classifications combined.
- (12) Obtain a correction factor by dividing the Expected Losses derived in (6) above by the Expected Losses derived in (11) above.
- (13) Calculate the "composite pure premium multipliers" for each industry group as the product of the following items:
 - (a) The pure premium correction factor determined in (12) above.
 - (b) The proposed experience rating plan off-balance factor (Collectible Premium Ratio).
 - (c) The inverse of the permissible loss and loss adjustment ratio.
 - (d) The estimated effect of the July 1, 2018 benefit change.
- (14) Apply the composite pure premium multiplier obtained in (13) above to the proposed total pure premiums to obtain Manual Rates.
- (15) Test to assure that the maximum departure of the Manual Rates derived in (14) above from current Manual Rates is in accordance with the following parameters:

Maximum Change in Rates:

Upward: The industry group average change plus 25% rounded to the nearest 1%.

Downward: The industry group average change minus 25% rounded to the nearest 1%.

- (16) Manual rates are to be rounded to the nearest \$.01.
- (17) Test the Manual Rates derived in (16) above to determine if balance has been achieved within 0.0005 of the indicated change in rate level by industry group. If such balance has not been achieved, calculate the necessary correction factor to adjust the composite pure premium multipliers derived in (13) above to achieve the necessary balance. Perform steps (14) through (17) iteratively until the desired balance is achieved.

RATE AND LOSS COST FORMULAE (continued)

Non-reviewed Classifications

(18) For classifications with insufficient credibility (non-reviewed classifications), an alternative calculation is used to derive indicated rates.

Insufficient credibility is defined as having five-year payroll less than that necessary to achieve 5% credibility for the non-serious component of pure premium. For non-payroll based classifications, expected losses replace payrolls.

For these non-reviewed classes, the indicated rate is calculated as follows:

- a) An average loss cost using Pennsylvania loss cost values and the Delaware distribution of business by class is calculated.
- b) Classification relativities are then calculated that relate the Pennsylvania loss cost by classification to the average overall loss cost calculated in (a) above.
- c) Indicated average loss costs are calculated by class by multiplying the relativities in (b) above times the average Delaware loss cost value for all classes combined times the average manual change in rates times the indicated composite pure premium multiplier.
- d) A second indicated rate is calculated by applying the average manual change in rates by industry group to the current Delaware rate for the class.
- e) A final indicated rate, subject to capping and balancing criteria previously described, is calculated by applying one-third weight to (c) above plus two-thirds weight to (d) above.

Loss Costs

The calculation of non-assigned risk classification loss costs will be made in accordance with the following procedure:

(19) Multiply the proposed assigned risk Manual Rates by classification by the permissible loss, loss adjustment expense and loss based assessment ratio.

Manufacturing = 1.0910
Contracting = 1.0442
All Other = 0.9299

EXHIBIT XI

CALCULATION OF TAX MULTIPLIER FOR USE IN RETROSPECTIVE RATING PLANS (O/T U.S.L. & H.W. Act Coverages)

Expense Provisions for O/T U.S.L. & H.W. Classes

| Losses | 58.38 |
|----------------------------|-------|
| Loss Adjustment Expense | 12.18 |
| Loss & Loss Adjustment | 70.56 |
| D : D: . | 0.00 |
| Premium Discount | 8.38 |
| Acquisition | 7.77 |
| General Expenses | 3.26 |
| Profit and Contingencies | 1.08 |
| Taxes | 2.33 |
| Uncollectible Premium | 1.10 |
| Workers' Compensation Fund | 3.00 |
| Administrative Assessment | 2.52 |
| | 29.44 |

lf

T = Tax multiplier

E = Expense provision in rates (General, Acquisition, and Profit), less premium discount

L = Loss provision in rates

C = Loss conversion factor

B = Assessments made on premiums

A = Assessments made on losses (adjusted so as not to collect profit and general expense dollars on the extra premium generated by the assessments)

Using average discount (Schedule Y) this yields:

$$ACQ \qquad GEN \qquad PROFIT \qquad PREM DISC$$

$$E = 0.0373 = 0.0777 + 0.0326 + 0.0108 - 0.0838$$

$$A = 0.0418 = 0.0431 \times \frac{1 - 0.0373 - 0.0643}{1 - 0.0099 - 0.0643}$$

Then

$$T = \underbrace{\begin{array}{ccc} 0.0373 + 0.5838 & (1 + 0.2087 + 0.0418) & x & 1 & = & 1.1347 \\ 0.0373 + 0.5838 & (1 + 0.2087) & & 1 - 0.0643 - 0.0255 \end{array}}_{\begin{subarray}{c} \hline \end{array}} = \underbrace{\begin{array}{c} 1.1347 \\ \hline \end{array}}_{\begin{subarray}{c} \hline \end{array}}$$

EXHIBIT XII

DELAWARE RETROSPECTIVE DEVELOPMENT FACTORS *

Retrospective development factors for first, second and third adjustments are calculated below. They are intended for use in retrospective plans with no loss limitation and applicable to the expected loss portion of premium.

| First Adjustment | RDF = | 0.5936 |
|-------------------|-------|--------|
| Second Adjustment | RDF = | 0.4595 |
| Third Adjustment | RDF = | 0.3797 |

For those companies using retrospective development factors with loss limitations, the following formula may be used.

$$RDF(LIM) = (1.0 - ELF) \times RDF$$

RDF(LIM) = Retrospective Development Factors at limited basis ELF = Excess Loss (Pure Premium) Factors exclusive of allocated loss adjustment expenses for given Hazard Group and Loss Limitation RDF = Retrospective Development Factors without Loss Limitation

For Example:

First Adjustment RDF =
$$(1 - 0.651) * 0.5936 = 0.2072$$

^{*} The use of retrospective development factors is optional.

DELAWARE COMPENSATION RATING BUREAU, INC.

Indicated Residual Market Rate Change

Page 1 presents the overall indicated changes in rates and loss costs.

Derivation of the indemnity and medical trend factors and trended loss ratios shown on page 1 is presented on pages 2 and 3.

Page 4 shows the derivation of overall frequency trend factors for each of the latest four policy years.

Staff is taking into account the impact of direct savings attributable to House Bill 373.

Note: As described in Exhibit 15, for low credibility classifications, an alternative approach may be employed to derive classification rating values. In those instances the final indicated rating value will generally be different than that shown in the Class Book.

December 1, 2017 Residual Market Rate and Voluntary Market Loss Cost Filing

Calculation of Composite Pure Premium Multipliers

| Item | Manufacturing and Utilities | Contracting and Quarrying | Other Industries |
|-----------------------------------------------------------|-----------------------------------|---------------------------------|---------------------|
| (1) Pure Premium Test Correction Factor | 0.9857 | 1.0023 | 1.0149 |
| (2) Off-Balance Factor (Collectible Prem Ratio) | 1.0910 | 1.0442 | 0.9299 |
| (3) Expense Provision (= 1 / 0.7056) | 1.4172 | 1.4172 | 1.4172 |
| (4) Effect of 7/1/18 Benefit Change | 0.9948 | 0.9948 | 0.9948 |
| (5) Rate Test Correction Factor | 1.0345 | 0.9889 | 0.9673 |
| (6) Composite Pure Premium Multiplier (1)*(2)*(3)*(4)*(5) | 1.5684 | 1.4592 | 1.2870 |

CALCULATION OF PER CLAIM AND CATASTROPHE LIMITATIONS

All Death, Permanent Total and Major Disability claims in the Delaware experience for Manual Years 2010 through 2014 were translated using composite multipliers, yielding an average claim value of \$ 1,109,530 . Using twice this value as unity and using the indicated Hazard Group Relativities produced the following results:

| Hazard Group | Hazard Group Relativities * | Per Claim Limit (2) * \$1,109,530 | Per Accident Limit (3) * 2 |
|-----------------|-----------------------------|--------------------------------------|-------------------------------|
| (1) | (2) | (3) | (4) |
| Α | 0.70 | 776,671 | 1,553,342 |
| В | 0.79 | 876,529 | 1,753,058 |
| С | 0.90 | 998,577 | 1,997,154 |
| D | 1.02 | 1,131,721 | 2,263,442 |
| Е | 1.15 | 1,275,960 | 2,551,920 |
| F | 1.30 | 1,442,389 | 2,884,778 |
| G | 1.47 | 1,631,009 | 3,262,018 |

[@] From Delaware 12/1/17 excess loss analysis materials

CREDIBILITY

The classification relativity criteria for 100 percent credibility for the various categories of loss are as follows:

Serious: 175 * Average Cost of Serious Case (including Medical)

Non-Serious: 500 * Average Cost of Non-Serious Case (including Medical)

Medical: 10 Percent of the Non-Serious

The following calculations are based on the figures in Table V, Section B.

| | | | | | AVERAGE |
|-------------------|--------|-------------|-------------|-------------|-----------|
| | No. | INDEMNITY | MEDICAL | TOTAL | COST |
| | Cases | AMOUNT | AMOUNT | AMOUNT | (4) / (1) |
| | (1) | (2) | (3) | (4) | (5) |
| Death | 25 | 9,791,500 | 25,987,900 | 35,779,400 | 1,431,176 |
| Permanent Total | 12 | 19,750,500 | 41,809,500 | 61,560,000 | 5,130,000 |
| Major | 1,054 | 298,779,800 | 475,148,900 | 773,928,700 | 734,278 |
| Total Serious | 1,091 | 328,321,800 | 542,946,300 | 871,268,100 | 798,596 |
| Minor | 3,283 | 134,947,000 | 233,664,800 | 368,611,800 | 112,279 |
| Temporary | 6,778 | 100,766,900 | 174,453,000 | 275,219,900 | 40,605 |
| Total Non-Serious | 10,061 | 235,713,900 | 408,117,800 | 643,831,700 | 63,993 |

Accordingly, the criteria for 100 percent credibility will be:

| | Indicated Average Cost | Selected Average Cost | Criteria for 100% Credibility | <u>-</u> |
|-------------|------------------------------|-----------------------------|-------------------------------------|----------|
| Serious | 798,596 | 1,109,530 | 194,167,750 | * |
| Non-Serious | 63,993 | 65,713 | 32,856,500 | ** |
| Medical | N/A | N/A | 3,285,650 | *** |

^{*} Serious Credibility = 175 x Selected Serious average cost

^{**} Non-Serious = 500 x Selected Non-Serious average cost

^{***} Medical = 10% of Non-Serious credibility criteria

EXPECTED LOSS CREDIBILITY TABLE
